

IBN Tech Expands BCDR Services to Help Firms Prevent Downtime, Meet Compliance & Combat Cyber Threats

Companies rely on IBN's BC/DR expertise to prepare for disasters, avoid costly interruptions, and ensure long-term resilience

MIAMI, FL, UNITED STATES, October 7, 2025 /EINPresswire.com/ -- Businesses all throughout the world are investing more in [Business Continuity and Disaster Recovery \(BC/DR\) services](#) in order to protect operations and lower financial losses as the frequency of cyberattacks, natural disasters, and operational disruptions rises. Industry analysts claim that companies that employ full-cycle BC/DR plans are better positioned to lower risks, limit downtime, and preserve revenue streams.

The disaster recovery as a service (DRaaS) market is expected to develop

at a 20% compound annual growth rate (CAGR) between 2023 and 2030, from its projected USD 32.3 billion in 2022 to USD 140.5 billion by 2030, per a recent analysis from Market Research Future. Analysts highlight the increased financial cost of service outages, the increasing reliance on electronic devices, and the more stringent compliance requirements.

Every minute of downtime costs your business- protect your systems before the next outage hits.

Distinguishing BC from DR

IBN Technologies: Business Continuity and Disaster Recovery services

While often grouped together, Business Continuity and Disaster Recovery serve distinct purposes. Business Continuity focuses on sustaining important operations during a disruption, whereas Disaster Recovery centers on restoring IT systems and data afterward. Modern BC/DR solutions increasingly employ cloud platforms, automated backups, and advanced analytics for real-time monitoring and accelerated recovery.

IBN Technologies' Comprehensive BC/DR Solutions

In response to the growing demand for business continuity, IBN Technologies has an entire range of BC/DR services offering company continuity whenever unforeseen interruptions arise. They offer:

- Disaster Recovery as a Service (DRaaS): IBN Tech provides fast recovery solutions on the cloud for business-critical systems that shield businesses from cyberattacks, hardware failures, or natural disasters.
- Business-Aligned Recovery Objectives: The firm maintains business-agreed recovery time goals (RTOs) and recovery point goals (RPOs), which reduce downtime and loss of data.
- Continuous Backup & Secure Storage: IBN Tech adopts continuous backups with secure, immutable storage for safeguarding data availability and integrity.
- 24/7 Monitoring & Ransomware Security: The services include 24/7 monitoring with advanced ransomware security and regular recovery drills to be prepared.
- Global Data Residency Options: Data residency within the US, UK, or India is supported to address local data protection regulations and enhance data sovereignty.

Key Drivers for BC/DR Adoption

Several factors are driving increased adoption of BC/DR services across industries:

1. Cybersecurity Threats: Rising attacks like ransomware make BC/DR essential to reduce risks.
2. Regulatory Compliance: Law compliance requires documented recovery steps.
3. Remote Work & Cloud Dependency: Digital transformation necessitates effective recovery alternatives.

Industry Impact and Benefits

Companies that adopt comprehensive BC/DR strategies report measurable improvements in

operational resilience and customer trust. Organizations with well-structured plans are able to minimize downtime, protect brand reputation, and maintain stronger relationships with clients and partners. More customers and stakeholders anticipate enterprise brands to showcase precise resilience capabilities, making BC/DR a key competitive advantage.

IBN Technologies' Commitment to Resilience

“Businesses today operate in an environment where downtime is no longer an option,” said Pratik Shah, Chief Technology Officer at IBN Technologies. “Whether caused by ransomware attacks, system crashes, or catastrophic weather conditions, any outage has the potential to cause serious reputational and operational harm. Spending on solid BC/DR services is no longer an IT issue; it's a strategic business imperative.

Looking Ahead

BC/DR services will become increasingly vital as the world's reliance on digital infrastructure develops. Future solutions, according to forecasters, will increasingly rely on predictive analytics, AI-driven automation, and inter-industry collaboration to tackle complex, multi-layered threats. To make sure they are ready for anything, businesses are advised to do risk assessments, regularly review their resilience plans, and collaborate with experienced BC/DR service providers like IBN Technologies.

For businesses of all sizes, downtime is a significant business risk. Securing assets, verifying operational effectiveness, and upholding customer trust all necessitate comprehensive business continuity and disaster recovery development in the more unpredictable world of today.
