

IBN Technologies Rolls Out Advanced Global BCDR Services

IBN Tech's DRaaS and BC/DR offerings maintain uptime, enable regulatory compliance, and fortify digital operations

MIAMI, FL, UNITED STATES, October 7, 2025 /EINPresswire.com/ -- Businesses all around the world are investing more in [Business Continuity and Disaster Recovery \(BC/DR\) services](#) to protect operations and lower financial losses as the incidence of cyberattacks, natural disasters, and operational disruptions rises. According to industry analysts, companies that implement full-cycle BC/DR plans are better positioned to lower risks, limit downtime, and preserve revenue streams.

IBN Technologies: Business Continuity and Disaster Recovery (BC/DR) services

In 2023, the Disaster Recovery as a Service (DRaaS) market is expected to develop at a 20% compound annual growth rate (CAGR) from USD 32.3 billion in 2022 to USD 140.5 billion by 2030, according to a recent analysis from Market Research Future. Analysts highlight the stiffer regulatory requirements, the increasing financial effect of service outages, and the growing reliance on digital devices.

Every minute of downtime costs your business- protect your systems before the next outage hits.

Distinguishing BC from DR

While often grouped together, Business Continuity and Disaster Recovery serve distinct purposes. Business Continuity focuses on sustaining important operations during a disruption, whereas Disaster Recovery centers on restoring IT systems and data afterward. Modern BC/DR solutions increasingly employ cloud platforms, automated backups, and advanced analytics for real-time monitoring and accelerated recovery.

IBN Technologies' Comprehensive BC/DR Solutions

In response to the growing demand for business continuity, IBN Technologies has an entire range of BC/DR services offering company continuity whenever unforeseen interruptions arise. They offer:

- Disaster Recovery as a Service (DRaaS): IBN Tech provides fast recovery solutions on the cloud for business-critical systems that shield businesses from cyberattacks, hardware failures, or natural disasters.
- Business-Aligned Recovery Objectives: The firm maintains business-agreed recovery time goals (RTOs) and recovery point goals (RPOs), which reduce downtime and loss of data.
- Continuous Backup & Secure Storage: IBN Tech adopts continuous backups with secure, immutable storage for safeguarding data availability and integrity.
- 24/7 Monitoring & Ransomware Security: The services include 24/7 monitoring with advanced ransomware security and regular recovery drills to be prepared.
- Global Data Residency Options: Data residency within the US, UK, or India is supported to address local data protection regulations and enhance data sovereignty.

Key Drivers for BC/DR Adoption

Several factors are driving increased adoption of BC/DR services across industries:

1. Cybersecurity Threats: Rising attacks like ransomware make BC/DR essential to reduce risks.
2. Regulatory Compliance: Law compliance requires documented recovery steps.
3. Remote Work & Cloud Dependency: Digital transformation necessitates effective recovery alternatives.

Industry Impact and Benefits

Companies that adopt comprehensive BC/DR strategies report measurable improvements in operational resilience and customer trust. Organizations with well-structured plans are able to minimize downtime, protect brand reputation, and maintain stronger relationships with clients and partners. More customers and stakeholders anticipate enterprise brands to showcase precise resilience capabilities, making BC/DR a key competitive advantage.

IBN Technologies' Commitment to Resilience

“Businesses today operate in an environment where downtime is no longer an option,” said Pratik Shah, Chief Technology Officer at IBN Technologies. “Whether caused by ransomware attacks, system crashes, or catastrophic weather conditions, any outage has the potential to cause serious reputational and operational harm. Spending on solid BC/DR services is no longer an IT issue; it's a strategic business imperative.

Looking Ahead

The need for BC/DR services will only increase as the world's reliance on digital infrastructure increases. Forecasters expect that predictive analytics, AI-driven automation, and inter-industry collaboration will become more prevalent in future solutions to tackle complex, multi-layered threats. Companies are encouraged to do risk assessments, regularly review their resilience plans, and collaborate with experienced BC/DR service providers such as IBN Technologies to make sure they are ready for anything.

A significant business risk for organizations of all sizes is downtime. Comprehensive business continuity and disaster recovery development are necessary in the more unpredictable world of today in order to secure assets, verify operational efficacy, and uphold consumer trust.
