

Human Intelligence Business Plans has developed a new way of building Home Healthcare Business Plans

Our firm has developed a unique and cost effective methodology for developing home healthcare business plans and non medical home care business plans.

NEW HOPE, PA, UNITED STATES, October 14, 2025 /EINPresswire.com/ -- Human Intelligence Business Plans has unveiled an innovative new method for developing a [home healthcare agency business plan](#) as well as a [non medical home care business plan](#). Through state-of-the-art analytics, Human Intelligence Business Plans has created a unique risk analysis model that produces realistic profit and loss statements, common size income statements, cash flow analyses, balance sheets, business ratios, and breakeven analysis. The [home healthcare business plan](#) model also examines current reimbursement rates as it relates to rendering skilled care services.

Most importantly, this new innovation allows for proper structure of financial models that can be used for the acquisition of SBA loans, working capital lines of credit, and private investment. The new analysis technology clearly demonstrates to lenders the economic viability of any non medical home care business or skilled care agency. This is accomplished by acquiring real-time demographic data which is inputted into Human Intelligence Business Plans' forecasting model.

Given the continued and ongoing demand for non medical in home care and skilled care as the US populace ages, this new methodology for developing business plans that showcase economic viability and growth trends is poised to be transformative for the industry.

Human Intelligence Business Plans is a full-service business planning firm that concurrently offers professionally designed pitch decks and presentations.
