

Colorado Homes with Large Windows Benefit from Layered Window Treatments, Says AIM

ENGLEWOOD, CO, UNITED STATES, October 14, 2025 /EINPresswire.com/ -- As Colorado's modern home designs continue to embrace open floor plans and oversized windows, homeowners are increasingly turning to layered [window treatments](#) to balance beauty with function.

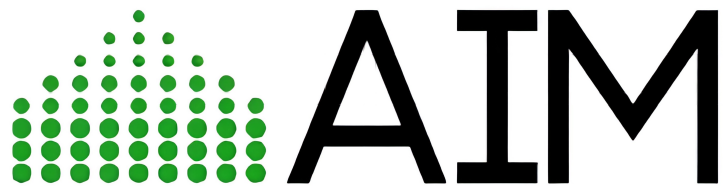

AIM, a locally owned window treatment company, reports a rise in demand for personalized solutions that combine style, privacy, and energy efficiency.

"Layering sheer curtains with roller or blackout [shades](#) is one of the most effective ways to maintain the stunning natural light these homes are known for—without sacrificing privacy or insulation," said a spokesperson for AIM. "Especially in Colorado, where the sun can be intense and winters are cold, layering gives homeowners more control."

AIM's in-home design consultations focus on these unique challenges. Their team helps homeowners choose from hundreds of fabric and material combinations to create a layered look that complements the home's interior while solving practical issues like heat gain, glare, and energy loss.

[Large windows](#) are a staple of Colorado architecture, especially in newer construction and mountain-view homes. But they also pose challenges: direct sunlight fades furniture, and single-layer shades often don't offer enough temperature control.

With AIM's expertise, homeowners can install double-duty solutions—such as motorized blackout shades tucked behind soft sheers—that adapt to the season and time of day.
