Meat production and consumption have increased rapidly over the years due to the increased disposable income of consumers and the health benefits offered by meat. In addition, meat is a rich source of proteins, important vitamins, and various other nutrients, such as iron, zinc, B12, and B6. It has been observed that meat consumption in developing economies is higher than the developed regions. The economic growth, changes in lifestyle, population growth, and other structural changes are driving the livestock revolution, hence supplementing the overall growth of the feed premix market.

However, government intervention in the usage of feed premix in every country is expected to restrain the market growth. The premix types used in animal feed are banned in some countries. As a result, the feed manufacturers carry out formula adjustments and make changes in feed processing, which is a time-consuming process. Thus, the implementation of stringent regulations hampers the market growth. Moreover, fluctuations in raw material prices are also expected to limit market growth.

An increasing population is a crucial element driving food consumption, which is expected to fuel the expansion of the feed premix market. Furthermore, increased meat consumption and the development of improved feed formulas contribute to the market's growth. However, a rise in raw material prices such as maize and corn, as well as the incidence of diseases such as avian flu, are likely to limit the market's growth throughout the projection period.

The report offers detailed segmentation of the global feed premix market based on livestock, type, form, and region. The report provides a comprehensive analysis of every segment and their respective sub-segment with the help of graphical and tabular representation. This analysis can essentially help market players, investors, and new entrants in determining and devising strategies based on fastest growing segments and highest revenue generation that is mentioned in the report.
