

HR Leaders Turn to Complete AI Training to Build an AI-Ready Workforce

AI use at work jumped from 8% to 35% in a year, but training lags. HR teams now use Complete AI Training to build confidence and future-proof staff.

CASPER, WY, UNITED STATES, October 20, 2025 /EINPresswire.com/ -- In offices everywhere, one thing is becoming clear: artificial intelligence isn't just reshaping technology, it's reshaping people's jobs. And while companies are moving fast to adopt AI, many employees are still trying to keep up.

A recent U.S. workforce survey found that the number of employees using AI jumped from 8% in 2023 to 35% in 2024. Yet only about a third said their employer had offered them proper training.

That gap is worrying HR leaders. If employees don't understand how to use AI, the tools meant to help them can easily become sources of frustration.

"The biggest challenge right now isn't technology, it's confidence," says Jeroen Ern , founder of Complete AI Training. "People want to use AI, but they need to be shown how it fits into their role."

A Wake-Up Call for HR Teams

The numbers are pushing HR departments to rethink how they approach professional development. According to HR Dive, more than half of workers said they didn't feel prepared to use AI in their daily jobs, and four in five wished they had more opportunities to learn. Yet fewer than four in ten executives are actively helping their teams become more AI-literate.

This is where platforms like CompleteAiTraining.com come in. It allows HR departments to roll out AI learning programs across all teams—from HR and finance to sales, operations, and tech. Instead of running scattered internal sessions, companies can connect directly to a platform built to teach AI in practical, role-based ways.

Making AI Training Practical

The platform offers more than 700 on-demand [AI courses](#) and professional certifications, all focused on how employees can apply AI directly to their jobs. The topics range from automating reports to using AI tools for recruitment, budgeting, communication, and analysis.

What sets Complete AI Training apart is its focus on personalization. Each employee can create a [Personalized AI Learning Plan](#) that maps out exactly what to learn based on their job title and goals.

"If AI is only explored by the IT department, the effort will fail," Ern  explains. "Every team should understand what AI can do for them."

Retention, Engagement, and Results

A laptop displays the Complete AI Training website, representing how companies are helping employees learn AI skills to stay confident and future-ready.

Complete AI Training is a global learning platform helping professionals and businesses gain practical AI skills through 700+ courses and certifications, and thousands of tools for over 220 job roles.

The link between learning and retention has become impossible to ignore. Research from Deel shows that 94% of employees would stay longer at a company that invests in their professional development. Organizations that encourage upskilling report higher engagement, stronger morale, and better innovation outcomes.

In many ways, AI learning is now part of the employee experience itself. Teams that feel supported and equipped to use new tools are more likely to experiment and find creative solutions. It's not about replacing people—it's about helping them work alongside technology in a smarter, more confident way.

Building Company-Wide Literacy

Complete AI Training also helps HR leaders manage learning at scale. Through its AI Courses by Job feature, companies can assign specific courses to departments so every team gets content relevant to its role.

For example, HR professionals might learn how to use AI to screen résumés or analyze performance data, while marketing teams explore how to generate content and insights faster. Employees who complete these programs earn [AI Certifications](#) they can add to their résumés or internal profiles.

And because the content is updated weekly, it never feels outdated. "The hardest part about AI right now is how fast it changes," Ern  says. "We built our platform to evolve with it."

A Cultural Shift

As more HR leaders adopt AI-focused learning strategies, the results are starting to speak for themselves. Companies that have integrated Complete AI Training into their development programs report that their employees feel more capable and less anxious about automation.

"Empowering employees with AI knowledge is the smartest way to future-proof both their careers and the company," Ern  adds. "When people understand AI, they stop fearing it and start using it to improve what they do best."
