

Law.co Expands Platform to Include AI-Generated Case Summaries and Statute Analysis

The new features empower attorneys to instantly generate accurate, citation-backed case digests and interpretive statute analyses.

SEATTLE, WA, UNITED STATES, October 21, 2025 /EINPresswire.com/ -- [Law.co](https://www.law.co), the AI-powered

“

Law firms have long struggled with balancing the speed of research and the depth of analysis clients expect.”

Eric Lamanna

legal software platform, today announced a major platform expansion that introduces [AI-generated case summaries](#) and automated statute analysis tools. These new capabilities aim to help attorneys and legal researchers synthesize complex legal texts faster and more accurately, dramatically improving efficiency and accessibility in legal workflows.

With this update, Law.co users can instantly generate concise case summaries and interpretive analyses that are traceable to the original case law and statutes. Each output includes jurisdictional tagging, key takeaways, and AI-powered cross-referencing to related precedents, all while maintaining rigorous citation integrity.

A New Era in Legal Research

“In law, accuracy is everything,” said Nate Nead, CEO of Law.co. “This expansion marks a major step forward in our mission to combine AI precision with human legal expertise. Attorneys spend countless hours parsing dense case law and statutes—our platform turns that process into minutes, not hours.”

The new features are built on Law.co’s proprietary large language model tuned specifically for legal data. This ensures that every summary is contextually aware, compliant with jurisdictional standards, and validated through Law.co’s citation verification engine.

Enhancing Legal Efficiency Without Compromising Integrity

“Law firms have long struggled with balancing the speed of research and the depth of analysis clients expect,” said Eric Lamanna, VP of Sales at Law.co. “By integrating automated case and

statute summarization directly into daily workflows, we're helping firms deliver better outcomes faster—without cutting corners on quality or accuracy.”

Timothy Carter, Chief Revenue Officer at Law.co, added, “Law.co isn't just offering another AI tool—we're changing the economics of legal research. This expansion empowers firms to increase throughput, reduce billable-hour waste, and focus their talent where it truly matters: strategy and advocacy.”

Driving Industry Innovation

Law.co's AI-generated case summaries are customizable by practice area—whether corporate, IP, real estate, or litigation—and its statute analysis engine supports real-time legislative interpretation across multiple jurisdictions. The system also provides explainable reasoning layers, ensuring transparency and auditability in AI-generated outputs.

Early adopters report research time reductions of up to 70%, with improved document consistency and enhanced client satisfaction. The company plans to roll out additional features in 2025, including predictive case analytics and semantic case clustering.

About Law.co

Law.co is an [AI-powered legal technology platform](#) that combines advanced language models with secure, ethical frameworks for contract drafting, legal research, and compliance. Designed for law firms and enterprise legal departments, Law.co enables faster, smarter, and more accurate legal work through cutting-edge natural language processing and private data infrastructure.
