Based on region, the market in North America was the largest in 2021, accounting for more than one-third of the global unified communications as a service market and is likely to maintain its dominance during the forecast timeframe. This is owing to the increase in demand for connected interfaces, growth associated with cloud technology, and penetration of bring your own devices (BYOD) in the U.S. However, the market in Asia-Pacific is likely to show the fastest CAGR of 18.6% during the forecast period. This is owing to the rapidly digitized straining cloud networks and data centers in the region, where the adoption of edge computing is helping to reduce latency, enhance security, and maximize reliability.

Based on component, the conferencing segment contributed to the largest share of nearly one-third of the global unified communications as a service market in 2021 and is expected to maintain its dominance during the forecast period. This is owing to the rise in remote working trend that led to an increased demand for UCaaS conferencing solutions, as businesses seek to communicate and collaborate effectively with their remote team solutions. The unified messaging segment, however, is projected to witness the fastest CAGR of 17.9% from 2022 to 2031. This is owing to the increasing demand for remote work and collaboration tools.

Based on deployment model, the hosted/cloud service segment grabbed the highest share of three-fifths of the unified communications as a service market in 2021 and is expected to dominate the market in 2031. This is because companies are looking for ways to improve collaboration and productivity among their employees. The managed service segment, however, would witness the fastest CAGR of 17.3% from 2022 to 2031. This is owing to the rise in cyber threats which has led to an increased demand for managed security services, including threat detection and response, data protection, and compliance management.

Covid-19 Scenario-

□ During the outbreak of the Covid-19 pandemic, the unified communications as a service market expanded due to the rising adoption of technologies, such as machine learning and artificial intelligence. This is because AI capabilities enable faster and more accurate manual task completions.

□ Moreover, the emergence of 5G technology during the pandemic period enabled high-speed

internet that boosted the market growth. This is because video and audio-conferencing require high speed and low latency in the connection, which is easily provided by the 5G network.

□Players in the market also enhanced their communication tools to provide better services to employees. For instance, in May 2020, Zoom Video Communication Inc. for unified communications-enabled organizations to add up to 52 weekly minutes' worth of productivity per employee, reduce IT troubleshooting time by 75%, and decommission redundant technologies valued at up to tens of millions of dollars annually.
