ANY.RUN Shares Cyber Threat Trends Report Q3 2025 for SOCs and MSSPs

DUBAI, DUBAI, UNITED ARAB EMIRATES, October 28, 2025 /EINPresswire.com/ -- ANY.RUN, an acclaimed developer of malware analysis and threat intelligence solutions, shares its quarterly Malware Trends Report. Its goal is to raise awareness of analysts, SOC teams, and management in businesses and organizations on latest malware targeting enterprises and methods used by threat actors for cyber attacks.

What makes ANY.RUN's Malware Trends Report Q2 2025 especially valuable is the fact that data it features is 100% exclusive, as it comes directly from live investigations by over 500,000 malware analysts and security teams at 15,000 companies worldwide.

□□□□□□□□□□ □□ □□□ □□□□□□□□□ □□

Some of the most concerning numbers are:

· The overall number of malicious files detected by ANY.RUN's users — 396,602. It grew by 42% since Q1 2025.

· Loader threats like Smoke Loader, HijackLoader, and GCleaner saw an increase in activity by 38% since the previous quarter. This malware type took second place on the list with 20,333 overall detections.

· Earlier this year, phishing threats saw a slight decline in activity. In Q3, however, they regained

power with +58% in detections.

· Finance, commerce, transportation, and manufacturing industries are among those mostly targeted by top malware families like Lumma, Agent Tesla, and XWorm.

Gain more insights into malicious activities, TTPs, malware types and families, as well as the most widespread phishing kits and APTs in Malware Trends Report Q3 2025.

You can use this verified data to navigate the current threat trends and take targeted defensive and proactive action accordingly.
