Major determinants of the market growth

Rise in demand from the agricultural sector and surge in use of monoisopropanolamine in the personal care and cosmetic industry have boosted the growth of the global monoisopropanolamine (MIPA) market. However, the toxicity of monoisopropanolamine hinders the market growth. On the contrary, advent of new applications of monoisopropanolamine would open up new applications in the future.

Key findings of the study

The personal care end-use industry is anticipated to register the highest CAGR of 6.2% during the forecast period.

Asia-Pacific garnered the highest share of 54.4% in 2020, in terms of revenue, growing at a CAGR of 6.3%.

The personal care segment to manifest the highest CAGR through 2030

By end-use industry, the personal care segment is estimated to portray the highest CAGR of 6.2% during the forecast period, due to use of monoisopropanolamine for the formulation of cosmetic products, shaving creams, and mascara. However, the chemical industry segment held the largest share in 2020, accounting for more than one-third of the global monoisopropanolamine (MIPA) market, owing to use of monoisopropanolamine for neutralizing fatty acid chemical compounds and sulfonic acid-based surfactants.
