

InstaKey Launches VAULT™ — A Patented Key Control System Redefining Physical Security Standards

LITTLETON, CO, UNITED STATES, November 4, 2025 /EINPresswire.com/ -- [InstaKey Security Systems](#), a leader in innovative key control solutions, has announced the launch of VAULT™, a new patent-protected key control system designed to deliver maximum security, hybrid compatibility, and simplified implementation for facilities of all sizes.

At the core of the VAULT system is the patented VAULT Door, a precision-engineered, tapered gate inside the core that physically blocks unauthorized keys from entry. Only a specially tapered VAULT Key can pass through, ensuring total key control and eliminating the risk of unapproved duplication. The technology is patent-protected through 2044, providing long-term peace of mind for businesses that require uncompromising access security.

“VAULT represents a major leap forward in physical key security,” said Ryan Carter, President at InstaKey Security Systems. “By combining innovation with compatibility, VAULT allows organizations to upgrade their security infrastructure without replacing existing hardware or disrupting operations.”

Backwards Compatible. Forward Thinking.

The VAULT Key Control System is backward compatible with both standard small format interchangeable core (SFIC) and InstaKey restricted keyway systems, allowing for phased implementation across large campuses, multi-site operations, and organizations managing complex access needs.

This hybrid design provides:

- Reduced downtime in supply chains and facility upgrades
- Lower system-wide replacement costs
- Enhanced key control and authorization management
- Ease of adoption with existing lock hardware

VAULT keys and cores are BHMA certified, backed by a five-year warranty, and compatible with standard SFIC service equipment — requiring no new tools or cutters.

Built for Distributors and End Users

InstaKey's distribution model ensures security integrity through its authorized distributor program. VAULT cores and key blanks are only sold to distributor-approved customers and direct end user clients after authorization verification, ensuring every installation maintains strict key control standards.

The system's documentation and certification are managed digitally through SecurityRecords.com, eliminating fax or email document exchanges and streamlining approval and ordering processes for authorized partners.

Innovative, Exclusive, and Built to Last

With more than 80 years of combined industry experience, InstaKey continues to redefine key control technology with products that enhance security while simplifying management for facilities professionals worldwide. VAULT embodies the company's mission to make key control smarter, safer, and more adaptable than ever before.

About InstaKey Security Systems

Founded in 1986 and headquartered in Littleton, Colorado, InstaKey Security Systems provides key control and access management solutions designed to simplify rekeying, improve accountability, and strengthen security. InstaKey's systems support large-scale enterprises and franchises across retail, restaurant, commercial, medical, education, and government sectors, helping them manage access efficiently with proven, scalable technology.
