Essential oils are generally extracted by distillation process, often by using steam. Other processes used in the production of essential oils are expression, solvent extraction, absolute oil extraction, cold pressing, and resin tapping. Essential oils find usage in perfumes, cosmetics, soaps, and various other products, for flavoring food & drink, and for adding scents to incense and household cleaning products. Essential oils are distinguished from the fatty vegetable oils, such as canola and sunflower, by the fact that they evaporate or volatize in contact with the air and usually possess a strong aroma.

These products are complex mixtures of organic chemicals, the nature and relative proportions of which are determined by the genetics of the plant species, environmental factors (e.g. climate), agricultural factors (e.g. soil conditions, nutrition, time and conditions of harvesting and methods of post-harvest handling), and manner of extraction. The chemicals present in essential oils may be classified as follows:

- Hydrocarbons of the general formula $(C_5H_8)_n$ -terpenes
- Oxygenated derivatives of these hydrocarbons
- Aromatic compounds having a benzenoid structure
- Compounds containing sulfur or nitrogen

Over last few years, consumer awareness regarding herbal products and food is on the rise. Most of the packaged food that are available in the market contains a variety of chemicals, some of which are very harmful to health, such as preservatives and flavor additives. Some preservatives are also linked with unfavorable effects, which can comprise unpleasant reactions in consumers that are sensitive to a particular preservative or a potential increased risk for cancer. In such situation, going herbal with products having no pesticides, chemicals, or processed additives and picking natural, herbal food to minimize risk of disease, illness, and disorders is the new trend. Many consumers are avoiding chemical ingredients in their food, health food, functional food, proteins, and nutraceutical products. Hence, demand for naturally sourced ingredients such as essential oils in nutraceuticals is increasing continuously. This demand is mainly increasing in developed regions of North America and Europe as consumers in this region are spending more on natural products compared to consumers in other regions. Hence, trend of using natural ingredients in the nutraceutical industry is proving one of the major factors to propel essential oils market growth.
