By Region, North America contributed notably toward the global construction management software market share in 2021, and is projected to continue its dominance during the forecast period. The region accounted for more than one-third of the global construction management software market share in 2021. The regional market growth over the projected timespan is owing to favorable government policies.Nonetheless, the Asia-Pacific construction management software market is set to record the highest CAGR of 11.1% during 2022-2031. The growth of the market in the region over the forecast timespan can be credited to the growing digital transformation of the construction sector in the sub-continent.

In terms of building type, the commercial buildings segment contributed to the highest market share in 2021, accounting for nearly three-fourths of the global construction management software market share. Moreover, the same segment is set to make notable contributions toward the global market share in 2031. The growth of the segment over the forecast timeline can be credited to the extensive use of construction management software for constructing commercial buildings.However, the residential buildings segment is predicted to register the fastest CAGR of 12.9% during the forecast timeline. The segmental growth over the forecast timeframe can be attributed to the rise in the digitization of small-scale construction firms and independent contractors in the construction sector.

In terms of application, the project management and scheduling segment contributed to the highest market share in 2021, accounting for nearly one-third of the global construction management software market share. Moreover, the same segment is set to make significant contributions toward the global market share in 2031. The growth of the segment over the forecast timeline can be credited to a huge demand for improving the quality of construction activities.However, the safety and reporting segment is predicted to register the fastest CAGR of 12.9% during the forecast timeline. The segmental growth over the forecast timeframe can be attributed to rising safety requirements and strict safety and reporting guidelines drafted by various governments for the construction industry.

Covid-19 Scenario:

 The COVID-19 pandemic had a favorable impact on the growth of the global construction management software market, owing to the large-scale use of remote management and

monitoring software during the lockdown.
 Moreover, the construction management software helped the construction firms in overcoming daunting challenges such as lower revenue margins, lesser productivity, and a decline in research activities.
