

New in-tank diesel filter DQTube Universal stops water & particles in the fuel tank before they can enter the fuel line

DQTube Universal represents the most important improvement in diesel filtration for all types of diesel trucks, tractors, lifts, boats and other diesel machines

HAVDRUP, DENMARK, December 29, 2025 /EINPresswire.com/ -- Denmark based, [Diesel Quality Technology & Solutions](https://www.dqtube.com), manufacturer of the first effective in-tank diesel filter, has developed their new [DQTube Universal](https://www.dqtube.com) product to serve the entire diesel truck

and moving equipment market worldwide. The DQTube Universal in-tank diesel filter is 3.5cm in diameter and 20cm in length and offers 150ml of water and particulate capacity for diesel tanks with an opening of at least 1.5-inches, which includes nearly all trucks, tractors, combines, lifts, cranes, loaders, generators, boats and other diesel machinery.

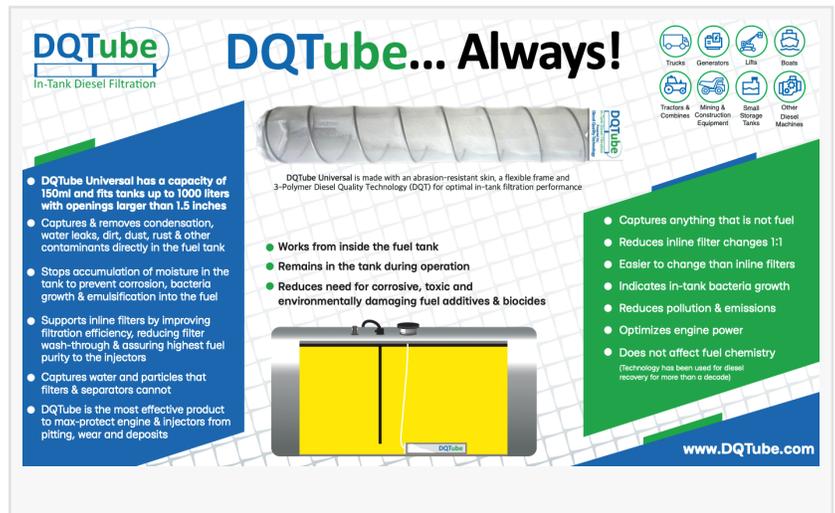

“

Engines & injectors are not degraded by contamination that filters stop, but by the contaminants that filters don't stop. DQTube captures contamination in the tank before it can get into the fuel line”

Rudi Mészáros, DQTube distributor

"There have been similar products on the market but they have had major flaws that limit their effectiveness. The design, the materials and the polymer technology inside of DQTube solves these flaws to make an ideal solution for filtering diesel inside the fuel tank that has big benefits for the entire fuel and engine system as well as improvements in equipment performance and reduced emissions." said Steve Schultz, Co-Founder of DQTube. DQTube Universal is made with a proprietary abrasion-resistant fabric skin, a flexible stainless steel frame and DQT 3-Polymer

Technology that captures water, dirt, dust, rust and other contaminants inside the fuel tank before they can create bacteria-growth & corrosion, mix into the diesel during refueling and movement or get into the fuel line to clog filters where up to 5% of contaminants will still get

DQTube
In-Tank Diesel Filtration

DQTube... Always!

DQTube Universal is made with an abrasion-resistant skin, a flexible frame and 3-Polymer Diesel Quality Technology (DQT) for optimal in-tank filtration performance.

- DQTube Universal has a capacity of 150ml and fits tanks up to 1000 liters with openings larger than 1.5 inches
- Captures & removes condensation, water leaks, dirt, dust, rust & other contaminants directly in the fuel tank
- Stops accumulation of moisture in the tank to prevent corrosion, bacteria growth & emulsification into the fuel
- Supports inline filters by improving filtration efficiency, reducing filter wash-through & assuring highest fuel purity to the injectors
- Captures water and particles that filters & separators cannot
- DQTube is the most effective product to max-protect engine & injectors from pitting, wear and deposits

- Works from inside the fuel tank
- Remains in the tank during operation
- Reduces need for corrosive, toxic and environmentally damaging fuel additives & biocides

- Captures anything that is not fuel
- Reduces inline filter changes 1:1
- Easier to change than inline filters
- Indicates in-tank bacteria growth
- Reduces pollution & emissions
- Optimizes engine power
- Does not affect fuel chemistry
(Technology has been used for diesel recovery for more than a decade)

Trucks, Generators, Lifts, Boats, Tractors & Combines, Mining & Construction Equipment, Small Storage Tanks, Other Diesel Machines

through to the fuel pump, injectors and the engine.

"As proven by our testing with the national fuel company, DQTube clears the tank of contaminants and ensures inline filters operate at peak efficiency, providing the cleanest fuel to the injectors. DQTube takes the filtration burden to protect the downstream engine system and optimize performance." Ziad Ayob, DQTube Distributor Angola.

"The significance of removing moisture directly in the fuel tank is that over time and through the movement of the machine, water is mixed or emulsified into the diesel fuel which causes that water to get through water separators and filters and straight into the engine. With DQTube you can literally see the water that is captured so our customers clearly see DQTube results regularly. As a diesel equipment dealer, there aren't many products with such clear results and such effect on the fuel filtration." Martin Rusevski, DQTube Distributor Balkans.

"Engines and injectors are not degraded by the contamination that filters stop, but by the contaminants that filters don't stop. One to five percent (1%-5%) of dirt and water that gets into the suction line will get into the injection and engine system. DQTube eliminates that contamination before it can get into the fuel line. As a career diesel professional who has replaced hundreds of injectors, I strongly recommend all of my customers use DQTube in all of their diesel tanks all of the time." Rudi Mészáros, DQTube Distributor Hungary.

"When vehicles move, fuel is stirred throughout the tank causing water and particulate to rise above the level of the suction line. Even worse, refueling causes a tank-wide agitation of

Diesel Quality Technology (DQT)

The only in-tank solution that improves diesel quality & protects the fuel tank

DQTube
In-Tank Diesel Filtration

Keep DQTube in your diesel tank at all times to upgrade fuel quality, optimize filtration and maximize tank protection

- Simple installation/ Simple replacement
- Will not block suction line
- Safe to store, ship and handle
- Non-toxic & Not an additive
- Tested, registered and utilized by fuel companies
- Safe for humans, animals, sealife & the environment

Advanced design, innovative materials and DQT's Polymer Technology allow for maximum water and particle capture as well as safe & reliable 24/7/365 use

www.DQTube.com

DQTube water capture: DQTube can capture water in the tank as quickly as 3 minutes and can also be left in the tank indefinitely to capture condensation daily and other water ingress & particles that may enter the fuel tank.

moisture, dirt and rust that is on the tank bottom that doesn't settle for quite a while after refueling. If you don't want to clean your fuel tank through your fuel system, you should certainly be using DQTube Universal in all of your diesel machines, all of the time." Christian Rabøl, Co-Founder of DQT&S ApS.

By significantly improving everyday diesel filtration as well as preventing more serious fuel issues, DQTube is a genuine breakthrough for diesel operators worldwide. Stopping up to 90% of water & particles directly in the fuel tank produces a domino effect of benefits including improved fuel purity to the injectors & engine, extended lifespan of fuel system & engine components, extended lifespan of inline filters & water separators, elimination of daily condensation and fuel tank water ingress and prevention of bacteria-growth and tank corrosion.

DQTube Universal is now available for pre-orders.

All DQTube products are non-toxic and safe for handling.

DQTube is interested in new resellers and market partners around the world.
