

MALIBAL Manufacturing Joins MadeInUSA.com

Building Tomorrow's Supply Chain Today

LEESBURG, FL, UNITED STATES, November 11, 2025 /EINPresswire.com/ -- At MadeInUSA.com, we champion American manufacturers who refuse to compromise on quality or principles. Today, we're proud to spotlight MALIBAL Manufacturing and their groundbreaking Project Liberation (<https://www.malibal.com/features/project-liberation/>)—an initiative that's making history as the first company to produce truly American-made laptop components.

After two decades of watching critical technology manufacturing disappear overseas, MALIBAL Manufacturing is taking a stand. Their mission: establish the first domestic laptop component supply chain, starting with revolutionary TMR (Tunneling Magnetoresistance) keyboards featuring maglev switches and precision haptic touchpads.

“

Technology hardware being made in the USA”

About time Tech items are made in the USA

A Legacy Built on American Values

MALIBAL Manufacturing emerges from the proven success of MALIBAL, LLC—a company that's spent 20+ years serving Fortune 500 clients like Boeing and Microsoft, plus government agencies including NASA and the Air Force. While other laptop makers chased cheaper overseas production, MALIBAL maintained its commitment to user

privacy, reparability, and American values.

"This isn't just about making keyboards and touchpads in America," explains the team at

MadeInUSA.com. "This is about proving that domestic electronics manufacturing can be innovative, profitable, and world-class. MALIBAL Manufacturing represents exactly the kind of technological sovereignty our country needs."

World-First Innovation, [Made in America](#)

Project Liberation's Phase 1 introduces technology that simply doesn't exist anywhere else: TMR keyboards with contactless maglev switches and precision haptic touchpads. These aren't just "assembled in America" products—they're designed, engineered, and manufactured from the ground up using domestic supply chains.

The implications go far beyond laptops. Every component produced creates the economic multiplier effect we know so well: American workers earning paychecks, supporting local businesses, and paying taxes that strengthen our communities. When you buy imported electronics, that money disappears overseas forever. When you support Project Liberation, those dollars circulate through American hands multiple times.

Building Tomorrow's Supply Chain Today

MALIBAL Manufacturing's vision extends through six phases, ultimately establishing complete domestic laptop production capability. Their asset-light approach partners with existing U.S. manufacturers, rapidly converting production lines rather than building expensive new facilities. It's smart, efficient, and scalable.

This strategy proves that American manufacturing doesn't need to start from scratch—it needs to be strategic, innovative, and committed to excellence.

Why This Matters Now

Recent supply chain disruptions exposed our dangerous dependence on overseas electronics manufacturing. Government initiatives like the CHIPS Act signal recognition that technological independence is national security. Consumer awareness of privacy, reparability, and ethical manufacturing is at an all-time high.

MALIBAL Manufacturing isn't waiting for someone else to solve these problems. They're building

the solution, component by component, creating American jobs while delivering technology that sets new global standards.

"Supporting Project Liberation means supporting the future of American technology manufacturing," says our editorial team. "This is how we rebuild industrial capability—one innovative company at a time, with products that prove American-made means world-leading."

Every purchase becomes a vote for technological sovereignty, supply chain transparency, and the principle that America's most important technology should be built by American hands.

The future of electronics manufacturing is being written right now. MALIBAL Manufacturing is making sure that story is written in America.
