

iVerify and FTI Consulting Announce Partnership To Combat Sophisticated Mobile Malware

NEW YORK, NY, UNITED STATES,
November 13, 2025 /

EINPresswire.com/ -- iVerify Inc., a leader in advanced mobile endpoint detection and response (EDR) solutions, and FTI Consulting, Inc., a leading global expert firm for organizations facing crisis and transformation, today announced a global partnership that will integrate iVerify's mobile protection into FTI Consulting's Cybersecurity offerings.

FTI Consulting serves clients across the business cycle, from proactive risk management to rapid response to crises and dynamic threat environments, providing natural synergy with iVerify's ability to detect the most advanced threats affecting mobile devices, which are becoming the preferred method of exploitation for threat actors and intelligence gathering thanks to the wealth of data and privilege such devices contain. Adoption of mobile security solutions lags while millions of venture capital and government dollars pour into the commercial spyware market. The partnership with iVerify allows FTI Consulting to provide real-time monitoring and threat detection assurance, which is then paired with FTI Consulting's crisis response and forensics experts, should a client be targeted.

"It's not surprising FTI Consulting's experts are early movers to offer mobile-focused solutions that reflect mobile becoming the primary target vector," said Danny Rogers, iVerify Chief Executive Officer. "Our research shows that among high-risk populations, there are at least 1.5 Pegasus infections per 1,000 phones and that number doesn't include other spyware strains. We're thrilled to align ourselves with the prestige of FTI Consulting and help identify these targeted attacks."

"Businesses face increasingly sophisticated and fast-changing threats that are trending toward mobile devices," said Anthony J. Ferrante, Global Head of Cybersecurity at FTI Consulting. "It's important that our experts have the most advanced arsenal of tools to help clients mitigate and

detect these threats as quickly as possible, and the capabilities of iVerify will enhance our mobile security strengths and resources.”
