

DevSecOps Managed Services Lift U.S. Enterprises with Faster, Compliant Software Builds

U.S. enterprises speed secure, compliant software delivery as demand for DevSecOps managed services grows amid advanced threats and stricter regulations.

MIAMI, FL, UNITED STATES, November 18, 2025 /EINPresswire.com/ -- The demand for DevSecOps managed solutions in the U.S. is escalating, fueled by heightened cybersecurity threats, evolving regulatory mandates, and the widespread shift toward cloud-native architectures. Companies in finance, healthcare, manufacturing, and government sectors are increasingly turning to [DevSecOps managed services](#) to integrate security seamlessly into their development pipelines, enabling faster and safer product deployment. With internal expertise limited and the investment required to establish secure DevOps pipelines substantial, IBN Technologies offers organizations cost-efficient and scalable options for automated compliance and continuous threat detection. For many enterprises, engaging DevSecOps managed services has become a strategic necessity, critical for protecting sensitive information, maintaining customer trust, and sustaining a competitive edge.

IBN Technologies: Expert in Outsourced Finance and Accounting Services

Analysts observe that this transition is reshaping cybersecurity practices across U.S. industries. Security is embedded from the outset of development, rather than applied retroactively. IBN Technologies supports this forward-looking approach by helping firms implement robust safeguards while adhering to complex regulations, including HIPAA for healthcare and PCI-DSS for financial institutions. As cyber threats grow more advanced, companies increasingly rely on DevSecOps managed services for round-the-clock monitoring, automated vulnerability scanning,

and swift response mechanisms often beyond the reach of internal teams.

Learn how scalable DevSecOps solutions can safeguard your organization.

Critical Industry Pressures Requiring Swift Strategic Intervention

The modern development landscape is burdened with complex security hurdles that traditional models fail to address:

- Disconnected security tools that generate workflow silos and harmful visibility gaps
- Compliance activities executed manually, creating slower deployment timelines and mounting audit risks
- Developer objections to security gates that are viewed as unnecessary friction in workflows
- Shortfalls in specialized talent, leaving teams unable to meet DevSecOps requirements
- Growing difficulty in integrating Infrastructure as Code scanning and Static Application Security Testing into established CI/CD processes

IBN Tech's DevSecOps Platform: Key Security-Integrated Services

IBN Tech's platform brings together a complete DevSecOps managed services suite that incorporates security from the beginning, helping businesses address critical operational and development issues:

- DevSecOps Evaluation & Improvement Roadmap: Through a maturity scan, gaps in tools, processes, and culture are identified, delivering a roadmap that aligns immediate upgrades with future-state development goals.
- Security-Embedded CI/CD Pipelines: CI/CD systems are enhanced with SAST, SCA, and DAST solutions (SonarQube, Snyk, Fortify), ensuring automated scanning workflows and compliance consistency.
- Secure Cloud Pipeline Engineering: AWS and Azure deployments are strengthened using policy-as-code mechanisms to prevent misconfigurations and maintain secure cloud operations.
- Secure Coding Support & Developer Upskilling: Developers benefit from updated secure coding frameworks, targeted educational programs, and vulnerability triage workflows that provide clear corrective actions.
- Regulatory Compliance & Automated Audit Support: Automated evidence gathering enables smoother audits for SOC 2, ISO 27001, HIPAA, GDPR, and more, with significantly reduced manual effort.

Client Success: Accelerated Delivery with Robust Security

Using DevSecOps managed services, organizations are increasingly delivering software at higher speeds while embedding security checkpoints throughout development.

- A prominent financial services organization reengineered its pipeline by integrating automated security validation, ongoing monitoring, and compliance assurance into its CI/CD operations.
- These improvements lowered critical vulnerabilities by 40% during initial development, improved release velocity by 30%, and allowed teams to drive innovation without exposing the organization to security risks.

Securing Innovation in a Rapid Market

Analysts note that as digital acceleration becomes a priority across industries, robust security automation is now essential for organizations seeking to deliver compliant and resilient software on a scale. Market projections reinforce this shift: MRFR reports that the DevSecOps market, valued at \$6.59 billion in 2022, is projected to hit \$23.5 billion by 2032—evidence of both the sector’s rapid growth and the increasing reliance on embedded security controls. In this expanding landscape, DevSecOps managed services providers will be instrumental in helping enterprises replace disjointed and reactive security processes with unified, intelligence-driven workflows. IBN Technologies is at the forefront of this movement, offering scalable security foundations, automated cloud governance, and continuous compliance capabilities integrated across modern development ecosystems.

In the coming years, U.S. DevSecOps adoption will be shaped by stricter regulatory oversight, more adaptive attack surfaces, and broader use of AI-powered development and monitoring systems. Enterprises implementing policy-as-code, automated audit evidence, and continuous risk scoring will gain measurable advances in deployment speed and operational resilience. For many organizations, dependable DevSecOps managed services partners will remain key to closing skill gaps and supporting long-term modernization. With this momentum building, IBN Technologies is positioned to help companies strengthen security posture, streamline pipelines, and future-proof their innovation roadmap.

About IBN Technologies

[IBN Technologies LLC](#) is a global outsourcing and technology partner with over 26 years of experience, serving clients across the United States, United Kingdom, Middle East, and India. With a strong focus on Cybersecurity and Cloud Services, IBN Tech empowers organizations to secure, scale, and modernize their digital infrastructure. Its cybersecurity portfolio includes VAPT, SOC & SIEM, MDR, vCISO, and Microsoft Security solutions, designed to proactively defend against evolving threats and ensure compliance with global standards. In the cloud domain, IBN Tech offers multi-cloud consulting and migration, managed cloud and security services, business continuity and disaster recovery, and DevSecOps implementation—enabling seamless digital transformation and operational resilience.

Complementing its tech-driven offerings, IBN Tech also delivers Finance & Accounting services such as bookkeeping, tax return preparation, payroll, and AP/AR management. These are

enhanced with intelligent automation solutions like AP/AR automation, RPA, and workflow automation to drive accuracy and efficiency. Its BPO Services support industries like construction, real estate, and retail with specialized offerings including construction documentation, middle and back-office support, and data entry services.□□□

Certified with ISO 9001:2015 | 20000-1:2018 | 27001:2022, IBN Technologies is a trusted partner for businesses seeking secure, scalable, and future-ready solutions.□□□
