

New Novel Challenges the AI World: Born Posthumous Explores the Soul of a Music Legend Recreated by AI

"Reality Bending" Novel Blends Literary Fiction, Speculative Sci-fi, and the Ethics of Digital Immortality

BLAIRSTOWN, NJ, UNITED STATES, November 19, 2025 /EINPresswire.com/ -- In releasing *Born Posthumous*, a literary speculative fiction novel, award-winning author Fish Nealman asks one of the most urgent questions of the AI era: What happens when technology resurrects a human being; not only their likeness, but their soul?

Born Posthumous follows the life, death, and digital rebirth of Manny Old, a world-famous musician whose brilliance was matched only by his personal struggles. After his death, a groundbreaking AI system called Echo reconstructs Manny's creative mind using his archives, memories, and emotional patterns.

The result is Posthumous Manny, an AI-powered artist capable of generating new music and forcing society to confront the blurry line between human consciousness and machine creation of an immortal soul.

Through Manny's AI resurrection, Nealman explores the collision of artificial intelligence, identity, consciousness, grief, and legacy in a world on the edge of technological overreach. Fans, critics, and Manny's own family must wrestle with the moral question at the heart of the novel: If AI can recreate a human soul, does immortality become a gift... or a violation?

"We're entering a moment where AI can mimic our voices, our memories, even our emotional signatures," Nealman said. "But should it? Through Manny's story, I wanted to explore what happens when technology stops being a tool and starts becoming a mirror, one that reflects us long after we're gone."
