

# Express Garden Named a Leading Chinese Corner Garden Sofa Manufacturer, Expanding Global Supply Partnerships

FOSHAN, GUANGDONG, CHINA,  
November 25, 2025 /

[EINPresswire.com/](https://EINPresswire.com/) -- Maximizing outdoor living spaces has become a practical priority for both residential and commercial projects. Modular corner garden sofas are often used to support this goal, offering adaptable seating that helps utilize limited areas while maintaining comfort and visual consistency. In this context, Express Garden, a [China Leading Corner Garden Sofa Manufacturer](#) reports steady demand for its modular corner sofa programs across retail, hospitality, and commercial applications. The company attributes this demand to the wider market interest in flexible outdoor layouts and long-term product performance.

## Production Capacity and Supply Chain Planning

Express Garden states that its production capacity reaches more than 500 containers per month, supporting ongoing supply for retailers, importers, and hospitality buyers. For large or seasonal orders, volume stability and predictable delivery schedules are typically important considerations.

The company operates self-owned manufacturing bases in China, Vietnam, and Indonesia, which it says helps reduce exposure to regional logistics disruptions and supports lead-time continuity. This multi-base structure is commonly used by large manufacturers to balance production loads and respond to demand changes during peak periods. Express Garden notes that the model allows it to adjust output for expanded projects or seasonal surges while maintaining established production processes.

## Modular Design Approach and Product Flexibility

Express Garden's corner garden sofas are developed around modular configurations. The company describes its standard sets as including left- and right-facing units, deep-seating modules, and ottoman sections that can be arranged to suit different outdoor footprints. This layout flexibility is intended to support applications ranging from hotel terraces to residential patios and balconies.

Frames are typically produced with powder-coated aluminum, paired with cushioning or synthetic rattan finishes depending on project requirements. Express Garden states that design engineering focuses on durability, corrosion resistance, and straightforward assembly for commercial and residential use. The company also notes that modular formats allow end users to expand or rearrange seating over time without requiring full replacement.

Beyond corner sofas, Express Garden reports manufacturing related outdoor categories such as chaise lounges and dining sets. These include products produced under its [China Aluminum Chaise Lounge Manufacturer](#) capabilities, which are often specified for pool decks, resort terraces, and other hospitality zones that require consistent outdoor styling across seating types.

#### OEM/ODM Customization for Private Label Programs

For retailers and hospitality groups, Express Garden says it provides OEM and ODM support that allows buyers to specify elements such as frame colors, fabrics, and size adjustments based on regional or brand requirements. These co-development projects are typically used to align outdoor furniture with local market preferences or property design standards.

Express Garden notes that customization can extend from compact balcony layouts to larger commercial terraces. In many cases, modular corner seating is coordinated with dining products to create cohesive outdoor zones. The company indicates that this coordination can include solutions produced through its China Aluminum Chaise Lounge Manufacturer lines as part of broader project packages.

#### Project Coordination and Long-Term Supply Relationships

Express Garden reports more than 25 years of export experience supplying outdoor furniture for retail chains and hospitality developments. The company states that its teams manage international compliance requirements, packaging standards, and shipping coordination to support large-scale procurement. For multi-site or phased installations, continuity in specifications and timelines is often treated as a core operational requirement.

According to Express Garden, its B2B model emphasizes ongoing collaboration with buyers, including planning support for repeat orders or new project phases. The company says this approach is designed to help clients manage procurement cycles with clearer forecasting and

fewer supply interruptions.

## Application Examples Across Markets

Express Garden reports completed supply projects across hospitality, residential, and commercial settings. Cited installations include Taj Exotica Resort & Spa in Dubai, Sofitel Dubai The Palm, and City of Dreams Mediterranean in Cyprus. These projects are presented by the company as examples of modular corner sofas being adapted to site-specific layout, capacity, and design requirements.

The company also states that its broader outdoor collection is designed for repeated use in varying climates, with product categories intended to align visually and functionally across multiple outdoor zones.

## Industry Context and Product Development Direction

Market trends in outdoor furniture continue to highlight modularity, sustainability, and multi-use layouts, particularly in hospitality and urban residential settings. Express Garden says it tracks these developments through ongoing design and material updates, and that its modular corner sofa systems are intended to address changing usage patterns over time. The company also notes that related categories—such as poolside seating and chaise lounges—are developed to fit the same performance and design expectations often required in hospitality settings.

## Summary

Express Garden reports that its modular corner garden sofa programs are supported by high-volume production capacity, multi-base manufacturing, OEM/ODM customization, and export-focused project coordination. The company positions these elements as relevant to importers, distributors, retailers, and hospitality buyers seeking flexible outdoor seating solutions with consistent specifications across different regions and project types.
