Melanoma Drugs Global Market Report 2025

What Is The Expected Cagr For The [Melanoma Drugs Market](#) Through 2025?

The market size for melanoma drugs has seen a quick expansion in the last few years. This market is projected to increase from \$9.17 billion in 2024 to \$10.15 billion in 2025, with a compound annual growth rate (CAGR) of 10.7%. The expansion during the past period can be credited to advancements in clinical research, rising occurrences, alterations in the treatment domain, enhanced diagnostic methods, and regulatory approvals.

Company*

The market for melanoma drugs is anticipated to experience a quick expansion in the coming years, reaching a size of "\$15.27 billion by 2029 with a

compound annual growth rate (CAGR) of 10.8%. The upswing during the forecast period is attributed to advancements in immunotherapy, research on biomarkers, a globally ageing population, emerging economies stretching their market horizons, and joint research initiatives. Significant trends for the forecast period encompass developments in adjuvant therapies, extended application of checkpoint inhibitors, stratification tactics for patients, incorporation of real-world evidence, and global cooperation in clinical trials.

What Are The Driving Factors Impacting The Melanoma Drugs Market?

The melanoma drug market is anticipated to expand in the coming years, propelled by an increase in male melanoma cases. Melanoma, a skin cancer type that originates from melanocytes - cells that control skin pigment, can be treated with melanoma drugs. These drugs work by targeting and inhibiting the expansion and proliferation of melanoma cells in the body. Consequently, a rise in melanoma prevalence will prompt a surge in the melanoma drugs market demand. For example, in 2023, the American Cancer Society, Inc., a US-based, nationwide, voluntary health entity focused on eradicating cancer, reported an increase in new male melanoma cases in the United States from 57,180 in 2022 to 58,120 in 2023. This growing melanoma occurrence in males is thus fueling the growth of the melanoma drug market.

Which Players Dominate The [Melanoma Drugs Industry](#) Landscape?

Major players in the Melanoma Drugs include:

- Amgen Inc.
- Bristol-Myers Squibb Company
- F. Hoffmann-La Roche A
- GlaxoSmithKline plc
- Janssen Biotech Inc.
- Novartis AG
- Pfizer Inc.
- Sanofi S.A.
- Takeda Pharmaceutical Company Limited
- Eli Lilly and Company

What Are The Future Trends Of The Melanoma Drugs Market?

A significant trend observed in the melanoma drugs market is the emphasis on product innovation. To solidify their foothold in the market, notable companies are concentrating on creating innovative solutions. As an example, in March 2022, Opdualag was sanctioned by the U.S. Food and Drug Administration (FDA), a federal agency within the United States. Bristol-Myers Squibb Company, a pharmaceutical firm based in the U.S, developed this drug. Opdualag is a fixed-dose combination of the LAG-3-blocking antibody relatlimab and the programmed death receptor-1 blocking antibody nivolumab, and is used to treat melanoma in both adult and pediatric patients. The two antibodies, relatlimab and nivolumab, which obstruct the programmed death receptor-1 and LAG-3 respectively, come together to form Opdualag. It's advised that adult and adolescent patients who are 12 years or older and weigh a minimum of 40 kg, be administered with 480 mg of nivolumab and 160 mg of relatlimab intravenously every four weeks, until disease progress or unacceptable toxicity is observed.

Global Melanoma Drugs Market Segmentation By Type, Application, And Region

The melanoma drugs market covered in this report is segmented –

- 1) By Therapy: Chemotherapy, Immunotherapy, Targeted Therapy
- 2) By Disease Type: Superficial Spreading Melanoma, Lentigo Maligna, Acral Lentiginous Melanoma, Nodular Melanoma

3) By Application: Hospitals, Outpatient Oncologist Clinics, Other Applications

Subsegments:

1) By Chemotherapy: Alkylating Agents, Antimetabolites, Plant Alkaloids, Topoisomerase Inhibitors

2) By Immunotherapy: Checkpoint Inhibitors, Interleukin Therapy, Oncolytic Virus Therapy, Cancer Vaccines

3) By Targeted Therapy: BRAF Inhibitors, MEK Inhibitors, Immune Modulators, Other Targeted Agents
