

Live Chat Software Market Reach USD 1.7 Billion by 2030

WILMINGTON, DE, UNITED STATES, December 4, 2025 /EINPresswire.com/ -- According to the report published by Allied Market Research, [Live Chat Software Market](https://www.alliedmarketresearch.com/live-chat-software-market) Reach USD 1.7 Billion by 2030. The report provides an extensive analysis of changing market dynamics, major segments, value chain, competitive scenario, and regional landscape. This research offers valuable able guidance to leading players, investors, shareholders, and startups in devising strategies for sustainable growth and gaining a competitive edge in the market.

Rise in need to improve customer relationship management (CRM), as it is crucial for effective revenue generation in any enterprise, and number of advantages of live chat software over conventional customer support boost the growth of the live chat software market. However, lack of standardization and continuous surge in demand for web mobile self-services are the major restraints of this market.

North America dominated the live chat software market in 2020. The top start-up accelerators in North America are building artificial intelligence-enabled tools to help businesses with customer support, sales, and marketing. For instance, North American businesses are using bots such as Claire, which is used for testing consumer products, ad campaigns and Scribe, which is an AI-powered “sales development representative” that can identify new leads. The combination of artificial intelligence and live chat software is anticipated to create enormous opportunities for this market.

On the basis of product, the customer service live chat system segment dominated the live chat software market share in 2020, and is expected to maintain its dominance in the upcoming years. Customer service live chat systems strongly reduces the effort it takes for visitors to receive answers to their questions. In the era of customer-focused businesses, live chat systems help to understand how and why unique customer events occur and what changes should be made to improve customer satisfaction. Moreover, rise in awareness about the benefits of the live chat software, which includes improved customer service & loyalty and customer convenience drive the market growth. However, sales live chat system is expected to register highest growth rate during forecasted period.

On the basis of end user, the retail & ecommerce segment dominated the live chat software market in 2020. Online chat software help retailers to connect with the customer during the shopping process rather than after a purchase. This reduces the need for retailers to deal with customer service requests in the future and allows them to cross-sell or upsell items due to which they are preferred by many of the retailers. However, travel & hospitality registered highest growth during live chat software market forecast period. The proliferation of discount travel agencies and automated ticketing websites in recent years have increased the competition in the travel industry by making it harder to attract customers and make profit. This has fueled the adoption of online chat software by number of players in the global travel & hospitality industry to gain competitive advantages over others.
