

PitPat Launches December Qualification Sprint: Global Online Race Opens, Offering the Final Ticket to the Grand Final

HOUSTON, TX, UNITED STATES, December 5, 2025 /EINPresswire.com/ -- As the world's leading online competition platform, [PitPat](#) has long been committed to driving the evolution of digital sports through advanced technology. With cross-device connectivity, real-time racing systems, and an open, dynamic online fitness ecosystem, PitPat brings runners from every corner of the world onto the same virtual track—delivering a professional-grade racing experience unrestricted by geography. In an era where digital fitness is rapidly becoming mainstream, PitPat has emerged as the most accessible, fair, and immersive platform for global runners. Now, the platform officially unveils its flagship event of 2025—the December Qualification Race 20KM—a crucial opportunity for runners worldwide to secure their place in the annual Grand Final.

The Qualification Race will kick off globally on December 1, 2025. All participants must complete the 20KM challenge within the event window, with PitPat ranking competitors using real-time performance data. Men's and women's results will be evaluated separately to ensure the highest fairness standards. This race is not only a test of endurance and speed—it is the only gateway to the annual Grand Final. The top 20 runners will earn direct entry into the championship event, where they will compete for over \$35,000 in total prizes and the honor reserved for elite athletes.

To maintain competitive integrity, PitPat reminds all participants of the following rules: runners may not pause for more than 10 minutes throughout the race, or their results will be invalidated; additionally, the full 20KM must be completed during the official event time frame. This is a

challenge built for those who persevere—a defining moment for runners who have trained consistently throughout the year and a final benchmark for many athletes' annual fitness goals.

PitPat Founder and CEO Kevin Zhang emphasizes that digital sports have evolved far beyond a supplementary training tool—they are becoming a new primary arena for global athletic competition. Technology, he notes, empowers people to transcend time zones, geography, and resource limitations, granting fair access to professional-level events. Kevin highlights that every runner deserves to be seen, recorded, and respected, and PitPat's global race system provides ordinary athletes with a meaningful way to step onto a competitive stage. The Qualification Race 20KM, he says, is more than a competition—it is a tribute to the values of equality, freedom, and personal breakthrough that define the digital sports era. PitPat's mission is to ensure that every runner, no matter where they come from, has the opportunity to shine on a worldwide platform.

PitPat supports a variety of smart fitness devices—including [DeerRun](#) and [SupeRun](#)—allowing runners to seamlessly connect their equipment and enter the global racing environment. Whether at home, in the gym, or in a personal training studio, runners can join the race at any time and compete in real time with opponents around the world. Smart treadmills accurately transmit key metrics such as speed, distance, and heart rate, ensuring each step is recorded instantly and delivering the intensity of an in-person professional race. For runners seeking more engaging daily training, the combination of DeerRun or SupeRun devices with the PitPat platform creates an immersive and motivating routine that is both easy to sustain and rich in ritual.

Smart fitness technology has made digital sports a true part of everyday life. First, real-time performance tracking provides the foundation for scientific training. By monitoring speed, cadence, heart rate, and power output, runners gain accurate insight into their physical state and can adjust their pace immediately. Over time, cumulative data helps runners understand their progress and optimize their training curve. In this transparent, data-driven environment, runners train with precision rather than relying on intuition.

Second, smart devices paired with PitPat's online race system transform each workout into an interactive and engaging experience. Running alone on a treadmill can feel monotonous, but now users can compete in real time with global runners, join leaderboard challenges, 1v1 PK matches, or distance competitions, and even view their opponents' pace and distance in the interface. Training becomes a rewarding and connected activity backed by feedback and a sense of achievement. Many runners discover new motivation because of this ongoing engagement.

Finally, smart fitness equipment enables safer and more sustainable training. Indoor exercise eliminates variables such as extreme weather, poor air quality, and unpredictable terrain, allowing runners to maintain consistent training throughout the year. Many smart treadmills offer advanced shock-absorption systems, reducing joint impact and lowering injury risk—an essential benefit for long-term runners. A stable training environment paves the way for steady improvement and a sustainable running lifestyle.

About PitPat

PitPat is the world's leading online competition platform, offering professional, immersive, and accessible digital sports experiences through smart-device connectivity and real-time competition. Supporting multiple brands of smart treadmills, PitPat has built a complete digital fitness ecosystem through global races, challenges, and training leaderboards. PitPat is committed to eliminating the barriers of geography, time, and resources—ensuring every runner can have a competitive stage in the digital era. The platform will continue integrating sports with cutting-edge technology to deliver fairer, higher-quality, and more motivating fitness experiences for users around the world.
