In addition, the green tire industry has witnessed significant growth in recent years, owing to increase in international trade across regions and rise in demand for low rolling resistance to be present among vehicles which creates a wider scope for the growth of the market across the globe. In addition, developments have been carried out by key manufacturers toward the introduction of advanced vehicle-based technologies which creates a wider scope for the growth of the market across the globe. For instance, in August 2022, The Yokohama Rubber Co., Ltd., announced the start of production at its Visakhapatnam Plant in India. The new plant was built to expand the production capacity of Yokohama Off-Highway Tires (YOHT), a Yokohama Rubber Group company engaged in the manufacturing and sale of off-highway tires (OHT), such as those used on agricultural and other equipment. Similarly, in July, 2020, Petlas launched all-season car tire, the PT565 MultiAction. The new tire has targeted both performance in all weather conditions and sustainability. Its R&D engineers developed the PT565 with lower rolling resistance to help reduce emissions. The tire has a V-shaped block pattern with its optimized sipes

density to offer better grip and traction on dry, wet, and snowy surfaces.

Moreover, with the increase in demand for fuel efficiency among vehicles, the need for superior tires has grown which creates a wider scope for the growth of the market across the globe. In addition, drivers are annoyed with high oil and diesel costs for a long time. It is not just private users that are distressing. The logistics sector is also affected, this is because despite ever-increasing fuel costs, various fleet operators and managers wanted that their vehicles are economical on the road. They can benefit considerable from innovations in the automotive and supplier industries in making vehicles more fuel-efficient. Changing to quality tires with low rolling resistance, also called green tires, can effectively and, above all, easily reduce fuel consumption. This is because around 20%-30% of a passenger car's total fuel utilization is caused by the tires rolling resistance alone. For heavy good vehicles it is as much as 40%. Green tires have a considerably lower rolling resistance than conventional tires. Utility vehicles can make fuel savings of up to 10% by employing green tires. Thus, these factors will further drive the green tire market towards a positive growth.

Moreover, the factors such as government regulation and economic drivers, increase fuel efficiency, and reducing rolling resistance are expected to drive the growth of the global green tire market growth during the forecast period. However, lack of awareness about green tire and structural limitation may impede future adoption green tire system is expensive act as key deterrent factors of the global market. Conversely, adoption of eco-friendly tire industry and technological advancement in automotive sector to foster growth are expected to open new avenues for the expansion of the global the green tire market during the forecast period.

COVID-19 Impact Analysis :

The manufacturing industry is facing a significant slowdown caused due to the COVID-19 pandemic. The world is struggling against the pandemic as well as a global economic recession. The lockdowns imposed by governments in most countries during the first three months of 2020 have severely impacted the global economy. many carmakers have reduced production and some have stopped their vehicle production. Consumers have also postponed new car purchases, all this collectively has negatively impacted tire-makers OEM business. For instance, in March 2020, Nissan suspended car production at its UK's car plant, Sunderland, after the coronavirus outbreak caused a "sudden drop in demand" and disruption to supply chains. Also, Ford temporarily stopped production in Europe in response to the COVID-19 outbreak in March 2020. The closing of all business operations to prevent the spread of the coronavirus has drastically impacted the production of green tire market. Furthermore, in March 2020, Hankook Tire announced that it will begin a temporary shutdown of its U.S. manufacturing facility, located in Clarksville, Tenn., in order to protect the health and safety of its employees in response to market demand that is being impacted by the coronavirus (COVID-19). Also, Kumho Tire

announced that its Macon, Georgia manufacturing plant will be shut down from in response to the rapidly evolving COVID-19 situation.

Key Findings Of The Study :

By type, the On- road tires segment is projected to dominate the global green tire market in terms of growth rate.

By application, the passenger cars segment is projected to dominate the global green tire market in terms of growth rate.

By tire size, the 18 inch segment is projected to dominate the global green tire market in terms of growth rate.

By sales channel, the aftermarket segment is projected to dominate the global green tire market in terms of growth rate.

Inquire Before Buying : <https://www.alliedmarketresearch.com/purchase-enquiry/2867>

The leading players operating in the green tire market are MICHELIN, Continental AG, Bridgestone Corporation, Pirelli & C. S.p.A, The Goodyear Tire & Rubber Company, Hankook Tire & Technology, The Yokohama Rubber Co. Ltd., Petlas, Kumho Tire, and MRF.

About us :

Allied Market Research (AMR) is a full-service market research and business-consulting wing of Allied Analytics LLP based in Wilmington, Delaware. Allied Market Research provides global enterprises as well as medium and small businesses with unmatched quality of "Market Research Reports" and "Business Intelligence Solutions." AMR has a targeted view to provide business insights and consulting to assist its clients to make strategic business decisions and achieve sustainable growth in their respective market domain.

We are in professional corporate relations with various companies, and this helps us in digging out market data that helps us generate accurate research data tables and confirms utmost accuracy in our market forecasting. Each and every data presented in the reports published by us is extracted through primary interviews with top officials from leading companies of domain concerned. Our secondary data procurement methodology includes deep online and offline research and discussion with knowledgeable professionals and analysts in the industry.
