On the basis of end user, the post-op shoe for adult is expected to grow at a CAGR of 5.2% during the forecast period. Adult segment shares largest revenue in this segment due to increase in the number foot as well as ankle injuries incident among adult that likely contribute in post-op shoe market growth.

On the basis of distribution channel, the medical and pharma store segment was valued at \$266.0 million in 2021 and is expected to reach \$438.1 million by 2031 at a CAGR of 5.1%. Product offering in the medical and pharma store is one of the factors that contribute towards the growth expansion in of the market.

North America holds largest global post-op shoe market share across the globe and is projected to continue this trend during the forecast period. This is majorly attributed to rapid development towards technology to enhance the product in post-op shoe market. However, Asia-Pacific is predicted to have the most promising growth rate, owing to the development as well as lucrative offering in the post-op shoe market.

During the COVID-19 pandemic, supply chain disruption was a major issue for manufacturers, as countries closed their borders or raised trade barriers. As a result, manufacturers and exporters faced fierce competition to sell their products abroad. Moreover, as a result of subsequent lockdowns and retail store closures, on-premise sales at supermarkets and convenience stores have decreased, as people have practiced social distancing and avoided gatherings and outings. Sales via online retail channels, on the other hand, significantly aided market penetration. All these factors had negative impact on post-op shoe market.
