

## Golding Extends Partnership with Harvest by Dasseti to Enhance Sustainability Data Across its Investment Platform

Golding expands use of Harvest's Al platform to improve data quality, streamline sustainability reporting, and deliver greater transparency to investors.

MUNICH, GERMANY, December 12, 2025 /EINPresswire.com/ -- Harvest by Dasseti, the Al-powered ESG data and investment intelligence platform, today announced that Golding Capital Partners, one of Europe's leading independent asset managers for

alternative investments, has extended its partnership with Harvest. The expanded collaboration will further streamline sustainability data collection and enhance regulatory reporting across Golding's diversified investment platform.

Golding invests across infrastructure, private credit, private equity, secondaries and impact, combining multi-manager strategies with increasing exposure to transaction-based and direct investments. This breadth of activity requires a scalable and efficient approach to collecting, structuring and validating sustainability data, especially given the fragmented reporting landscape of private markets.

Harvest supports these needs through its suite of Al-powered tools that automate document extraction, map portfolio companies across complex ownership structures and validate data using agentic Al workflows. This reduces manual workloads, improves data quality, and increases coverage across underlying managers. It also helps institutional investors meet growing regulatory expectations while delivering greater transparency to their stakeholders.

"Golding's decision to extend our collaboration underscores the strength of Harvest in addressing the complexities of ESG data management for investors operating across multiple strategies," said Billy Cotter, Head of ESG at Dasseti. "We share a commitment to enabling clarity, transparency and actionable sustainability insights."

"Consistent and reliable ESG data is essential for meeting regulatory expectations and supporting our investment processes. Harvest enables us to efficiently manage diverse data flows across our strategies and enhances the transparency we provide to our investors," said Christian Schuetz, Managing Director & Head of Sustainable Investing at Golding.

Harvest by Dasseti delivers Al-powered data warehousing, high coverage and seamless reporting, supporting investors with real-time insights, reduced workloads and streamlined reporting to LPs. Designed for LPs, GPs, credit, infrastructure, VC, and impact managers, Dasseti is used in 40 countries to manage over 34 trillion in assets.
