

Clover Tool Transforms Automotive Manufacturing with Commport's EDI Solution, Boosting Efficiency and a 4-Month ROI

NEWMARKET, ONTARIO, CANADA, December 11, 2025 /EINPresswire.com/ -- Clover Tool Manufacturing Limited, a leading Canadian automotive tooling and stamping manufacturer, has revolutionized its operations through the implementation of Commport Communications Inc.'s Electronic Data Interchange (EDI) solution. This strategic digital transformation has resulted in a 90% reduction in advanced ship notice processing time, an 80% acceleration in client onboarding, and a return on investment (ROI) realized within just four months.

Facing operational challenges with their legacy EDI system, including inefficient data processing, manual entry errors, and excess inventory costs, Clover Tool manufacturing sought a modernized, integrated solution to maintain competitiveness in the fast-paced automotive sector. [Commport's tailored Integrated EDI platform](#) seamlessly integrated with Clover Tool Manufacturing existing ERP system, enabling real-time inventory management and streamlined transaction processing.

"Because of manual data entry errors, we would order more inventory unnecessarily and then it would end up costing more to sit on that inventory," said Jot Grewal, IT Manager at Clover Tools. "Commport's solution not only eliminated these errors but also dramatically improved our operational efficiency."

Key outcomes of the implementation include:

ASN processing time reduced from 2.5 hours to 40 minutes per transaction

Client onboarding accelerated from 8-10 weeks to just 2 weeks

Weekly time savings exceeding 58 hours, translating to over \$1,600 in cost reductions per week

Enhanced just-in-time manufacturing capabilities through real-time inventory management

Commport's Canadian-based support and ability to customize solutions according to specific customer needs were critical factors in the successful and timely deployment of the project.

Building on this success, Clover Tool Manufacturing is planning a phase 2 implementation at its

Ultramet Industries facility to further automate and scale its operations.
