

# Year-End Auto Offer: Complimentary Alignment Check Available

*Year-end auto offer includes a complimentary alignment check to improve safety, extend tire life, and help drivers confidently drive into the new year ahead.*

GRAND RAPIDS, MI, UNITED STATES, December 26, 2025 / EINPresswire.com/ -- 616 Auto Repair has announced a December service initiative focused on vehicle safety, inspection accuracy, and preventative vehicle maintenance. As part of this Year-End Auto Service Offer, customers who bring their vehicles in for any qualifying automotive service during the month of December are eligible to receive a [Free Wheel Alignment Check](#). The alignment inspection is provided as a supplemental evaluation intended to help identify potential handling or tire wear concerns before the end of the year.

Wheel alignment plays a critical role in how a vehicle drives, responds, and maintains tire condition over time. A Vehicle Alignment Inspection evaluates whether the wheels are positioned according to manufacturer specifications. When alignment angles shift due to normal wear, road conditions, or suspension stress, it can result in uneven tire wear, steering instability, or reduced driving efficiency. By offering a complimentary alignment check with any service, 616 Auto Repair is encouraging vehicle owners to address alignment concerns proactively rather than reactively.

Wheel Alignment Service-

Free Wheel Alignment Check -

This December offering aligns with the shop's ongoing emphasis on preventative vehicle maintenance, particularly during a season when road conditions and temperature changes can affect suspension components, tires, and steering systems. The Free Wheel Alignment Check allows technicians to review alignment measurements using calibrated equipment while the vehicle is already on site for service.

The alignment inspection does not require a separate appointment and is conducted alongside scheduled maintenance or repair services. If alignment irregularities are identified, customers are provided with clear findings so they can decide whether to proceed with a full Wheel Alignment Service at that time or plan corrective service at a later date.

#### Expanded December Service Programs

In addition to the Free Wheel Alignment Check, 616 Auto Repair has outlined several service programs available during December that address tire condition, vehicle stability, and safety system assessments. These offerings are structured to provide detailed inspections and long-term maintenance planning rather than short-term promotional incentives.

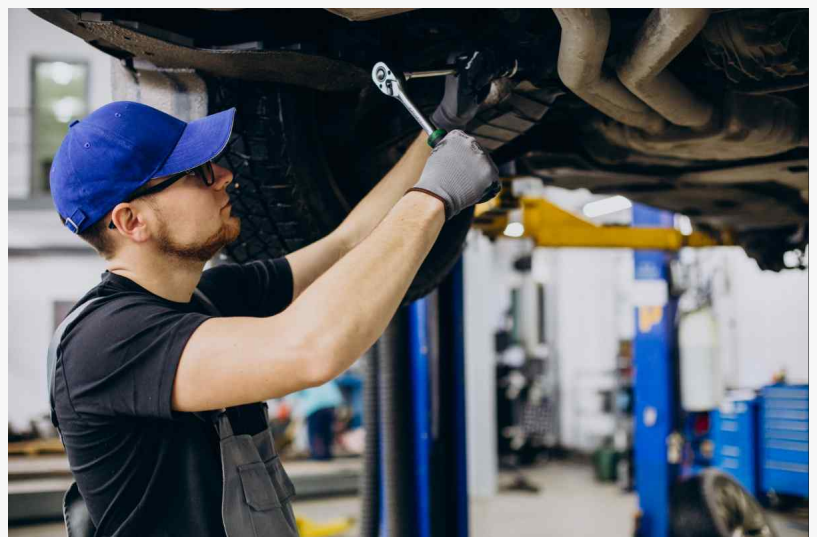

One such option is the "Tires + Alignment Bundle." This bundled service includes the installation of a set of four tires selected according to vehicle specifications, a professional wheel alignment service, and complimentary tire rotation for one year. Tire rotation is a routine

Vehicle Alignment Inspection

Preventative Vehicle Maintenance

Professional Auto Repair Service

maintenance procedure that helps promote even tread wear over time and supports consistent vehicle handling. By combining tire installation, alignment, and rotation services, the bundle is structured to address multiple aspects of tire performance in a coordinated manner.

Tire condition and alignment are closely linked. Even new tires can experience premature wear if alignment angles are not properly set. The Tires + Alignment Bundle is designed to ensure that tires begin their service life under correct alignment conditions, with scheduled rotations supporting long-term maintenance planning.

Another December service option is the “Family Safety Check.” This inspection-based service focuses on evaluating braking and suspension systems, which are central to vehicle control and stopping performance. The Family Safety Check includes a brake inspection, a suspension system assessment, and a written estimate outlining any findings or recommended services identified during the evaluation.

Brake inspections involve reviewing components such as pads, rotors, and hydraulic operation to ensure braking systems are functioning as designed. Suspension inspections assess components that influence ride stability and vehicle response, including shocks and struts. Following the inspection, customers receive written documentation summarizing results, supporting informed decision-making regarding future maintenance or repairs.

#### Alignment Checks as Preventative Maintenance

The Free Wheel Alignment Check offered in December is intended to serve as a diagnostic tool rather than a corrective service. Alignment inspections help technicians determine whether wheel angles remain within manufacturer-recommended tolerances. Minor alignment deviations can develop gradually and may not immediately present noticeable symptoms to the driver.

Unchecked alignment issues can contribute to uneven tire wear patterns, steering pull, or changes in vehicle handling over time. Conducting a Vehicle Alignment Inspection during routine service visits supports early identification of these conditions. When alignment adjustments are required, a full Wheel Alignment Service can restore proper wheel positioning and help reduce unnecessary strain on tires and suspension components.

616 Auto Repair performs alignment services using equipment calibrated to manufacturer specifications, allowing for accurate measurements based on vehicle design. Alignment adjustments are performed when customers authorize corrective service following inspection findings.

#### Financing Options for Larger Services

As part of its December service availability, 616 Auto Repair notes that financing options may be available for customers requiring larger repairs or tire replacements. Financing considerations may apply to services such as tire packages, suspension repairs, or other higher-cost

maintenance needs. Availability and terms are discussed directly with customers during service consultations.

This approach allows vehicle owners to address necessary maintenance or safety-related repairs while considering payment flexibility. Financing availability does not alter inspection outcomes or service recommendations, which are based solely on vehicle condition and manufacturer guidelines.

### Role of Preventative Vehicle Maintenance

Preventative vehicle maintenance is widely recognized as an effective strategy for supporting vehicle reliability and safety. Regular inspections and scheduled service intervals allow technicians to identify wear patterns, fluid degradation, and component fatigue before they develop into more extensive concerns.

Services such as tire inspections, alignment checks, brake evaluations, and suspension assessments contribute to overall vehicle stability and predictable handling. Seasonal changes, including winter weather, can increase stress on steering and suspension systems, making year-end inspections particularly relevant.

Through its December service offerings, 616 Auto Repair emphasizes inspection-based maintenance that provides vehicle owners with accurate information about the current vehicle condition. This approach supports planning for future service needs rather than reacting to unexpected breakdowns or performance issues.

### Professional Auto Repair Services in Grand Rapids

616 Auto Repair operates as a [professional auto repair service](#) serving drivers in Grand Rapids and surrounding communities. The shop provides a range of automotive services focused on maintenance, diagnostics, tire services, braking systems, steering and suspension evaluation, and alignment work. Services are performed by ASE-certified technicians using diagnostic tools and procedures consistent with industry standards.

As a [trusted auto repair shop](#), 616 Auto Repair prioritizes clear documentation, accurate inspections, and service recommendations based on observed vehicle conditions. Customers receive written estimates and explanations that outline findings without pressure to proceed beyond what is required or requested.

The facility services both domestic and imported vehicles and supports maintenance schedules recommended by vehicle manufacturers. This includes routine inspections and more comprehensive evaluations when vehicles exhibit handling, braking, or tire wear concerns.

### December Availability

The Free Wheel Alignment Check is available during the month of December when paired with any qualifying service appointment. Availability is subject to scheduling capacity, and customers are encouraged to confirm service details when arranging appointments. The Tires + Alignment Bundle and Family Safety Check are also available during this period as structured service options.

All services are provided at the shop's Grand Rapids location.

### About 616 Auto Repair

616 Auto Repair is an automotive service facility based in Grand Rapids, Michigan, providing maintenance, diagnostic, tire, brake, suspension, and alignment services. The shop employs ASE-certified technicians and focuses on inspection-based service planning, preventative vehicle maintenance, and accurate repair documentation. Serving Grand Rapids and nearby communities, 616 Auto Repair supports a wide range of vehicle makes and models with services designed to maintain safety, reliability, and manufacturer-recommended performance standards.
