

# KFSHRC's Biobank Supports Translational Research and Data Driven Care

RIYADH, SAUDI ARABIA, December 29, 2025 /EINPresswire.com/ -- At King Faisal Specialist Hospital & Research Centre (KFSHRC), the Biobank operates as a foundational research infrastructure that links clinical care with long-term scientific inquiry. Rather than functioning as a standalone repository, it supports studies designed to translate biological data into clinically relevant insights.

The Biobank provides researchers and clinicians with access to a wide range of biospecimens collected under standardized protocols. These include blood derivatives, tissue samples, and liquid biopsies, all curated to support studies in areas where disease behavior, treatment response, and outcomes vary significantly between patients.

With capacity to store millions of biospecimens, the Biobank is supported by integrated electronic systems that manage sample tracking, data security, and access governance. This structure allows research teams to work with high-quality materials while ensuring patient privacy and regulatory compliance remain central to all activities.

The Biobank supports research across multiple disease areas, including oncology, cardiovascular and neurological conditions, metabolic disorders, rare diseases, and age-related health challenges. Samples are used to study disease progression, identify biomarkers, and support the development of more targeted diagnostic and therapeutic approaches.

Governance frameworks guide how samples are collected, stored, and used, ensuring that research activity aligns with ethical standards and institutional oversight. This approach enables collaboration with internal and external researchers while maintaining clear accountability and transparency.

By embedding the Biobank within its clinical and research ecosystem, KFSHRC continues to

strengthen its capacity for data driven medicine, where patient care informs research and research, in turn, supports more informed clinical decision making.

KFSHRC ranks first in the Middle East and Africa and fifteenth globally among the world's top 250 academic medical centers for 2025. It also holds the highest valued healthcare brand in Saudi Arabia and the region, according to Brand Finance 2024, and is listed by Newsweek among the World's Best Hospitals 2025, the World's Best Smart Hospitals 2026, and the World's Best Specialized Hospitals 2026.
