

# Soundcore Introduces The World's First Dual-Form Earbuds with Open-Ear and ANC Forms

*Adjustable Ear Hook Can Seamlessly Switch From Open Ear Comfort to Noise Cancelling -- All Without Changing Earbuds*

BELLEVUE, WA, UNITED STATES, January 5, 2026 /EINPresswire.com/ --

Soundcore, Anker Innovations' smart audio and video brand, today launched the AeroFit 2 Pro, the world's first dual-form earbuds that enable users to switch between an open-ear form and active noise cancellation (ANC) form. As a CES Innovation Awards Honoree, the AeroFit 2 Pro were designed to meet the needs of users whose daily routines require different scenarios throughout the day.

**Dual-Form Earbuds For All Scenarios**  
Recently, consumers needed to choose between open-ear comfort and an immersive noise-cancelling experience. The AeroFit 2 Pro addresses these trade-off by enabling two functions within in a single pair of earbuds, allowing users to adapt to different scenarios without changing devices. During long work days in the office when comfort and awareness is preferred, users can switch to the open ear form, however when a deeper focus is required, can turn to ANC to achieve peace and quiet.

Utilizing a five-level adjustable ear-

Soundcore's New AeroFit 2 Pro in Purple Offer Both Open Ear and ANC Feature in Single Pair of Earbuds

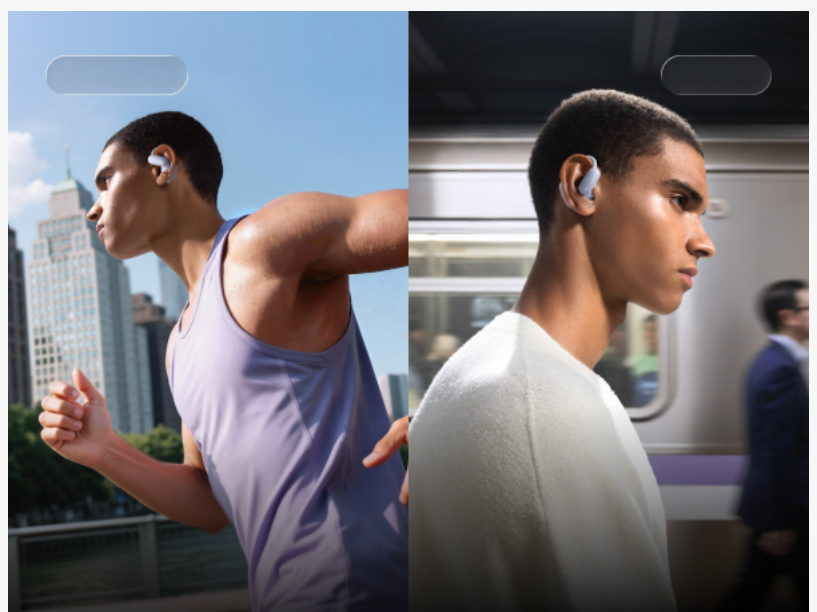

hook structure, users of the AeroFit 2 Pro can adjust the position of the ear-hook, so the "nozzle" can be re-positioned close to the entrance of the ear canal that adds passive noise isolation while enabling active noise cancellation by creating a proper seal. Two built-in sensors in each earbud (four in total) automatically recognize the current wearing state and recalibrate the EQ in real time, ensuring consistent and optimized sound performance across both listening modes.

#### Open-Ear Comfort for All-Day Wear

The AeroFit 2 Pro feature a five-level adjustable ear-hook system designed to accommodate a wide range of ear sizes and wearing preferences, thanks to the 56-degrees of articulation. Soft liquid silicone ear hooks help reduce pressure during extended wearing sessions. In their open-ear function, the earbuds avoid direct contact with the ear canal to maintain a comfortable experience as well as environmental awareness. When switched to the semi-in-ear ANC feature, the shallower fit combines passive noise isolation with active noise cancellation while reducing in-ear pressure.

#### Adaptive ANC in Noisy Environments

The earbuds integrate active noise cancellation into a shallow, open-ear design, combining passive noise reduction with Soundcore's Adaptive ANC 3.0, which checks environmental factors up to 380,000 times per second and can make up to 180 dynamic adjustments per minute, helping adapt noise reduction to changing environments and different wearing conditions. A six-microphone array captures sound from multiple directions, enabling cleaner noise reduction and a quieter listening experience.
