

# Fertility Pro EMR Introduces Intelligent Trigger Shot Identification to Support Timely Ovulation Management

*Helping care teams deliver the trigger shot at the right moment, every time*

DENVER, CO, UNITED STATES, January 7, 2026 /EINPresswire.com/ -- [Fertility Pro EMR](#), a leading electronic medical record platform purpose-built for fertility and [IVF](#) clinics, today announced the release of a new clinical decision-support feature designed to identify patients in active treatment cycles who require evaluation for a trigger shot to induce final egg maturation and [ovulation](#).

This new capability continuously analyzes cycle data to surface patients approaching the optimal window for trigger administration, helping clinical teams act with greater precision and confidence during a critical phase of ovarian stimulation.

“

In IVF, timing the trigger shot is critical—given too early or too late, outcomes can change. Precision timing aligns egg maturity with retrieval for the best chance of success.”

*John Butler*

“Timing is everything in assisted reproduction,” said John Butler, Managing Partner at Fertility Pro EMR. “This feature gives providers proactive visibility into which patients may be ready for trigger evaluation, reducing the risk of missed windows while supporting more consistent, protocol-driven care.”

Key benefits of the new feature include:

**Proactive patient identification:** Automatically flags patients in-cycle who meet defined clinical criteria for trigger shot evaluation.

**Improved clinical workflow:** Reduces manual chart review and reliance on memory or ad hoc tracking tools.

Decision support, not automation: Supports physician judgment by highlighting candidates for review, without replacing clinical discretion.

Enhanced cycle management: Helps ensure timely intervention to optimize egg maturity, ovulation timing, and downstream outcomes.

The trigger shot identification feature integrates seamlessly into existing Fertility Pro EMR workflows and dashboards, ensuring minimal disruption while delivering immediate clinical value. Like all Fertility Pro enhancements, the feature is configurable to align with clinic-specific protocols and physician preferences.

This release reflects Fertility Pro EMR's continued commitment to delivering intelligent, fertility-specific tools that improve efficiency, reduce operational risk, and support high-quality patient care.
