

Bidaible Launches Platform to Eliminate RFQ and Bid Management Chaos for Commercial and Residential Construction Firms

Bidaible's platform reduces construction bid management time while improving accuracy and providing actionable intelligence for contractor selection.

AUSTIN, TX, UNITED STATES, January 9, 2026 /EINPresswire.com/ -- Bidaible today announced the

The construction industry has been managing RFQs and bids with tools that were not designed for this. Bidaible gives preconstruction teams time back while reducing risk and improving decision-making."

Roy Gatling, Founder at Bidaible

launch of its RFQ and Bid management platform designed specifically for general contractors, subcontractors, and commercial construction teams. The platform addresses a critical pain point in the industry: the time-consuming, error-prone process of managing bid solicitations and evaluations through email threads and spreadsheets.

According to recent industry studies, preconstruction teams spend an average of 10-15 hours per project managing RFQ distribution, tracking bid submissions, and performing cost comparisons using traditional methods. Bidaible's AI-enhanced platform automates these workflows, reducing processing time by up to 80% while

improving accuracy and providing actionable intelligence for [contractor selection](#).

"The construction industry has been managing one of its most critical processes—bid management—with tools that were never designed for the complexity of modern construction projects," said Roy Gatling, Founder at Bidaible. "We built Bidaible to transform this process into an intelligent, data-driven, tool that gives preconstruction teams back their time while reducing risk and improving decision-making."

Key Platform Capabilities:

Intelligent Document Processing

Bidaible processes multiple file types including drawings, specifications, and addendums up to 30MB each, automatically classifying documents and extracting critical project information. The

system generates comprehensive summaries with project overview, scope analysis, timeline insights, and professional recommendations.

Automated Bid Comparison and Analysis

The platform provides side-by-side bid analysis with detailed cost code breakdowns using CSI MasterFormat standards. Comprehensive CSV and PDF exports deliver individual cost code line items in a format optimized for ERP workflow integration, eliminating manual data entry and reducing comparison time from hours to minutes.

Real-Time Collaboration and Notifications

Multi-channel notification system keeps all stakeholders informed with instant alerts for RFQ processing completion, bid submissions, and status changes. Complete audit trails provide full transparency throughout the bid lifecycle.

The platform serves both general contractors managing the bid solicitation process and subcontractors responding to RFQs, creating a connected ecosystem that improves communication and reduces friction throughout the bidding cycle.

Early adopter feedback has been overwhelmingly positive.

Pricing and Availability

Bidaible is available immediately with tiered pricing designed for firms of all sizes. General contractor plans start at \$149/month for 3 RFQ projects per month and scale to \$699/month for Unlimited RFQ projects with dedicated support and API access. There are two Subcontractor plans available with one for Free and the upgrade plan for \$29/month with unlimited bid proposal submissions. Interested firms can schedule a demo or start a 14 day free trial at <https://bidaible.com/>.

About Bidaible

Bidaible is a construction technology company focused on modernizing preconstruction workflows for commercial construction firms. By combining AI-powered document processing with intuitive bid management tools, Bidaible helps general contractors and subcontractors reduce risk, save time, and make better-informed decisions throughout the bidding process. Industry Context:

The commercial construction bidding process has remained largely unchanged for decades, despite significant technological advancement in other areas of project delivery. Research indicates that miscommunication during the bidding phase contributes to 30-40% of construction disputes and change orders. Bidaible addresses this gap by applying modern AI and workflow automation to the preconstruction phase, where decisions have the greatest impact on project outcomes.
