Synametrics Technologies Inc. has introduced a new version of Syncrify Version 6.1 (Build 1171)

Empowering Businesses with Enhanced Security and Usability in Data Backup Solutions

MILLSTONE, NJ, UNITED STATES, January 12, 2026 /EINPresswire.com/ -- Synametrics Technologies, a leading provider of secure and innovative software solutions for businesses worldwide, has announced the release of Syncrify Version 6.1 (Build 1171). This latest update delivers meaningful enhancements to security and usability, further establishing Syncrify as a reliable solution for secure, private cloud backup.

Syncrify

Synametrics Technologies Inc.

The key highlight of this release is enhanced outbound email security, including support for OAuth 2.0 authentication and client side SSL certificates. With OAuth 2.0, Syncrify can send emails through modern cloud mail services (such as Microsoft 365) using secure token based authentication instead of traditional username/password, meeting current provider security requirements. Additionally, client side SSL certificate support enables Syncrify to authenticate to SMTP servers using trusted digital certificates during the TLS handshake, offering a password free alternative where certificate based SMTP

authentication is required. These features strengthen email security and ensure compatibility with strict mail server environments.

Syncrify provides a 100% on-premise, self-hosted backup and file synchronization solution designed for businesses that rely on secure, reliable, and scalable infrastructure. Tailored for organizations of all sizes, Syncrify's robust feature set ensures seamless data protection and access across platforms and devices.

Key features include:

1) File and Folder Synchronization
2) Automated and Multi-Tiered Backups
3) SyncrBox for Private File Sharing
4) Versioning and Two-Way File Synchronization
5) Remote Accessibility
6) Incremental Backups for bandwidth and storage optimization

Security continues to be a core focus of Syncrify. The platform includes AES-256-bit encryption, granular access controls, ransomware protection, and multi-factor authentication to safeguard data confidentiality and integrity.

With built-in email notifications, backup scheduling, detailed reporting, and data compression for faster transfers, Syncrify ensures a streamlined and efficient backup process. The solution also supports deduplication to optimize storage further.

With its intuitive interface and flexible deployment options, Syncrify is well-suited for a broad spectrum of applications, from personal to enterprise-level needs. Whether managing multi-tier backup files, synchronizing data across multiple locations, or securely sharing files, Syncrify stands out as a dependable and comprehensive solution for efficient data management and protection. With these updates, businesses can trust that Syncrify will provide a secure, dependable method for managing backups, ensuring their data remains consistently protected.
