

Made in USA Inc. (USDW) and USD1 Launch Verified Commerce Ecosystem for Global Trade Settlement

USDW integrates Veritize™ Data Wallets with USD1 stablecoin to enable programmable compliance and instant on-chain settlement for verified American goods.

NEW YORK, NY, UNITED STATES, January 23, 2026 /EINPresswire.com/ -- [Made in USA Inc. \(OTC: USDW\)](#), a pioneer in blockchain-based origin certification and real-world data verification, today announced a strategic integration between its [Veritize™ Data Wallet™](#) infrastructure and USD1, the U.S. dollar-backed stablecoin issued by [World Liberty Financial](#).

Veritize Data Wallet

The collaboration establishes the world's first enterprise-grade system that unites verified physical goods, immutable data identities, and stablecoin settlement into a single, unified on-chain commerce network.

“

Stablecoins have solved digital liquidity; Veritize solves digital truth. Together with USD1, we are ensuring that verified real-world goods move with instant settlement and provable authenticity.”

*Michelle Tan Co-Founder
MADE IN USA INC.*

Bridging Physical Reality and Digital Liquidity The Veritize™ system transforms physical events into machine-verifiable data. Every certified product, factory, or origin source generates a unique Data Wallet™ containing encrypted production records, supply-chain history, and compliance documentation. A cryptographic hash anchors this data on-chain, creating an immutable digital fingerprint for real-world assets.

Under the new integration, USD1 becomes the native settlement currency for this verified trade

ecosystem. By embedding USD1 directly into Veritize™ wallets on the Solana and Polygon networks, certified enterprises can now execute wholesale transactions, pay for verification services, and conduct cross-border procurement using a stable, programmable, and compliance-aware digital dollar.

Programmable Compliance: A Breakthrough for Trade The partnership introduces "Programmable Compliance" for global commerce. Through smart-contract logic, USD1 payments can be automatically authorized only after Veritize™ confirms a product's origin, certification status, and regulatory eligibility. This ensures that capital only moves when truth is verified—a critical advancement for ESG reporting, government procurement, and supply-chain finance.

"Stablecoins have solved digital liquidity; Veritize™ solves digital truth," said a spokesperson for Made in USA Inc. "Together with USD1, we are unlocking a new era where verified real-world goods move across global markets with instant settlement and provable authenticity."

Scaling the Truth Economy By leveraging Solana's high-throughput architecture and Polygon's institutional ecosystem, the collaboration enables real-time data capture and financial integration at scale. This infrastructure also lays the foundation for Real-World Asset (RWA) financing, allowing for inventory-backed credit and trade liquidity powered by verified data.
