

# How Cloud-Based Platforms Are Cutting Costs in Healthcare Onboarding and Credentialing

KANSAS CITY, MO, UNITED STATES, January 23, 2026 /EINPresswire.com/ -- [New adoption data](#) shows cloud-based credentialing and onboarding platforms are reshaping healthcare operations as organizations look for solutions to cut costs. By getting providers credentialed and onboarded faster, clinicians can start practicing sooner, there's great scheduling availability for patients, and organizations can lighten administrative overhead. Cloud-based platforms have advanced dramatically in recent years and technology like automations and AI, have made them the best solution to avoid the delays and errors that typically hold up credentialing and payer enrollment.

New hire onboarding in healthcare is especially tedious with the volume of compliance-related tasks not needed in most other industries. Combined with high staff turnover, most healthcare organizations are welcoming a steady stream of new employees. [Cloud-based healthcare compliance software](#) can automatically assign required compliance training, HR forms, and policy acknowledgment. This eliminates potential delays in assigning the tasks and also improves accuracy with specific paths by employee role, department, and location.

Cloud-based platforms are arguably more important when new hires are licensed providers. Before they're able to start delivering care, providers must be credentialed and enrolled with insurance payers. This process is often plagued with costly delays that can cost healthcare organizations thousands of dollars a day. MedTrainer [medical credentialing software](#), considered among the best names in healthcare credentialing, standardizes the process, eliminating confusion, duplication, and delays between tasks. The introduction of AI-powered workflows has brought even greater efficiencies with the ability to automatically complete lengthy credentialing applications, and streamline the tedious process of provider document collection.

At a time when margins and reimbursements are shrinking and healthcare organizations are looking for ways to cut costs, cloud-based platforms are the option of choice for leaders in the field.
