

Brandon Ward Urges Southwest Businesses to Prepare Now as Winter Freeze Approaches

Fuel Logic Advises Companies To Arrange Delivery Access Before Temperatures Drop and Supply Tightens

MIDLOTHIAN, TX, UNITED STATES, January 24, 2026 /EINPresswire.com/ -- Cold weather forecasts are tracking toward Texas, Louisiana, and Oklahoma, and Brandon Ward at Fuel Logic is telling business owners to stop waiting and get their fuel arrangements finalized today.

"Last-minute scrambling when the thermometer drops costs real money," Ward said. "The companies staying functional through winter months aren't the ones making calls after ice arrives. They contacted their fuel provider weeks before, locked in their access, and moved on. That single decision determines whether operations continue or grind to a halt."

When temperatures plummet across a region, fuel consumption spikes dramatically. Distribution networks get overwhelmed. Standard delivery windows get pushed back. Roads become hazardous, making pickups impossible. Any business relying on fuel-powered equipment faces a genuine operational crisis if they haven't secured their supply chain beforehand.

Fuel Logic built its entire operation around solving this exact problem. Rather than depending on regularly scheduled deliveries that may or may not happen when weather deteriorates, business operations contact Fuel Logic, and fuel arrives. The company maintains service across 340+ locations throughout the three states, ensuring response times stay fast regardless of location or conditions.

Ward outlines what operations managers should accomplish immediately:

- Examine your tank inventory and document actual fuel consumption numbers for every piece

Winter Freeze in Southwest - Call Fuel Logic for Emergency Fuel

of running equipment. Don't estimate consumption, measure it. Track your daily usage rates accurately.

- Contact a fuel delivery company capable of functioning during winter weather before the seasonal rush hits. Waiting longer puts you behind countless other businesses racing to secure capacity once conditions worsen.

- Activate your backup systems and verify they function properly. Generators and fuel-dependent machinery that haven't operated in months may malfunction when activated. Test everything now.

"We field constant inquiries from operations that waited too long," Ward explained. "Managers call after cold hits, fuel is scarce, trucks aren't moving, and their facility is already sitting idle with crews standing around. That's expensive and completely avoidable. Reaching out beforehand takes one conversation."

Construction projects lose weeks when fuel supply evaporates. Manufacturing floors slow production because backup generators can't refuel. Fleet operations can't dispatch vehicles. Data centers drain reserve fuel they can't replenish. The cascading costs exceed the fuel itself by orders of magnitude.

Fuel Logic entered this market because standard supply chains consistently fail businesses when conditions become difficult. The company designed its service model specifically for situations where normal logistics break down.

"You're not selecting between good fuel service and better fuel service," Ward said. "You're choosing operational continuity versus operational shutdown. During winter, that distinction defines your quarter."

Fuel Logic operates nationwide, offering specialized [mobile fuel delivery](#) across Texas, Louisiana, and Oklahoma. The company serves manufacturing operations, construction enterprises, fleet management companies, facilities operating backup power systems, and any organization where fuel supply interruption creates financial losses. With mobile delivery capability across 340+ service territories, Fuel Logic specializes in fuel delivery that works when standard suppliers don't.
