

Artsyl Strengthens Trust for AI Process Automation with SOC 2 Type 2 Certification

Reinforces confidence in Artsyl's intelligent automation for invoices, orders, and other document-centric workflows - backed by continuous controls testing.

VAUGHAN, ON, CANADA, February 3, 2026 /EINPresswire.com/ -- Artsyl Technologies, Inc., a leading provider of [intelligent process automation](#) solutions, today announced it has achieved SOC 2 Type 2 certification for its docAlpha Intelligent Process Automation Platform, confirming

“

docAlpha, the AI-powered Intelligent Process Automation platform, drives secure automation of invoices, orders, and documents - reinforced by SOC 2 Type 2 certification for trusted performance.”

*Artur Vassilyev, President /
Dir. of Engineering at Artsyl
Technologies*

that Artsyl's security controls are not only designed appropriately, but also operated effectively over time. This milestone builds on Artsyl's SOC 2 Type 1 achievement and completes the SOC 2 cycle, giving customers and partners stronger assurance that Artsyl's security practices are consistently executed under real operating conditions.

Artsyl's SOC 2 Type 2 examination, performed by independent service auditor Coalfire Controls, LLC, validates the continued operation of security controls over an extended period, aligning with a continuous assurance approach.

“SOC 2 Type 2 is where security becomes measurable over

time, not just documented,” said Artur Vassilyev, President and Director of Engineering at Artsyl Technologies. “Our customers run high-volume, business-critical automation through docAlpha, and this achievement reinforces what they need most: confidence that our controls are consistently working day after day, while they scale automation across departments, systems, and regions.”

Security That Enables Faster Automation

Artsyl's platform is built to help organizations modernize document-heavy operations with [intelligent automation](#), from invoice and sales [order processing](#) to claims and complex, multi-step workflows. docAlpha and Artsyl's ActionSuite solutions streamline capture, validation, approvals, and ERP posting while supporting secure integration across enterprise

environments.

The SOC 2 Type 2 achievement further strengthens Artsyl's positioning for organizations that require strong vendor assurance, especially where automation intersects with compliance requirements, procurement scrutiny, and third-party risk management.

Built for Cloud and On-Premise Deployments

Artsyl supports both on-premises and cloud-based implementations of docAlpha, including deployments hosted on the Microsoft Azure platform. This flexibility helps customers standardize automation while meeting internal IT policies, integration requirements, and security expectations, without slowing down their automation roadmap.

What It Means for Partners and Resellers

For Artsyl partners and resellers, SOC 2 Type 2 strengthens every security conversation by providing independent validation that the controls behind Artsyl's automation environment are operating effectively over a defined period. That gives partners more confidence when positioning Artsyl solutions in enterprise and compliance-sensitive opportunities, helping reduce friction in security reviews and accelerating deal cycles.

Availability of the SOC 2 Type 2 Report

The SOC 2 Type 2 report is intended for designated parties with sufficient understanding of the system and the scope of the examination. Artsyl can provide the report upon request to eligible customers, prospects, and partners.
