

# Grade Timber Launches Free Timber Tools to Empower Illinois Landowners in Understanding the Value of Select Harvest

*Free Tools for Accurate Timber Volume & Valuation: Empowering IL Landowners to Maximize Select Harvest Benefits Sustainably*

ALTON, IL, UNITED STATES, February 5, 2026 /EINPresswire.com/ -- Grade Timber, a leading provider of sustainable timber services based in Alton, Illinois, today announced the release of two innovative free downloadable tools: the Timber Volume Count Template and the [Timber Valuation](#) Template. Designed to work in tandem, these resources help landowners across Illinois accurately estimate timber volumes

and assess market values, enabling a deeper understanding of the economic and sustainable benefits of [select harvest](#) practices. Tailored for regions throughout the state, including areas in counties such as Madison, Jackson, Union, Adams, Randolph, Alexander, Jefferson, and

Sangamon, the tools simplify complex forestry calculations without the need for expensive surveys, supporting informed decisions on selective harvesting, sales, and long-term forest management.

In an era of growing emphasis on [sustainable forestry](#), these templates empower Illinois landowners to evaluate their timber resources responsibly. By combining volume estimation with valuation insights, users can identify high-

value trees for select harvest—promoting forest health, biodiversity, and ongoing revenue potential while avoiding over-harvesting. Incorporating local species, regulations, and market data relevant to Illinois, the tools provide actionable insights into the true worth of standing

timber.

"Our mission at Grade Timber is to equip landowners with practical resources that highlight the value of select harvest," said Beau Shymansky, Owner/Operator of Grade Timber. "These free templates streamline assessments, reduce errors, and empower users to make sustainable choices that maximize forest value. They're essential for pre-harvest planning in Illinois communities, helping landowners negotiate better and steward their lands for generations."

Key features of the Timber Volume Count Template include:  
Sections for recording tree species, DBH (diameter at breast height), and height.  
Automated calculations using rules like Doyle or International 1/4".  
Easy-to-use grids for plot sampling and total estimates in board feet, cords, or tons.  
Tips on measurement tools and best practices for select harvest identification.

Key features of the Timber Valuation Template include:  
Inputs for species grading, defects, accessibility, and local stumpage prices.  
Charts for value ranges, market comparisons, and Illinois-specific factors like transportation costs.  
Built-in calculators for total worth, with low, average, and high scenarios.  
Integration with volume data to project revenue from select cuts.

Available for free download in PDF, Word, or Excel formats with no sign-up required, landowners can get started by:  
Gathering data from sample plots using the Volume Count Template.  
Inputting details and generating volume totals.  
Transferring data to the Valuation Template, adding market assessments.
