

Surveill Announces Next Version of Its Platform, Advancing Human Led AI for Legal and Compliance

Surveill launched the next version of its platform, advancing human led AI for legal and compliance.

CORAL GABLES, FL, UNITED STATES, February 10, 2026 /EINPresswire.com/ -- Surveill today announced the next version of its platform, marking a major step forward in its mission to automate legal and compliance decisions while keeping humans firmly in control.

Website

This release represents a significant evolution of Surveill's underlying technology and a clearer articulation of its approach to human led AI, where artificial intelligence is designed, supervised, and accountable at every critical step of the compliance and legal review process.

In less than two years, Surveill rebuilt its platform three times from the ground up. The latest version reflects a deliberate focus on flexibility, precision, and consistency, driven by the belief that compliance technology must adapt to firms rather than force firms to adapt to rigid systems.

"Every firm is different. Risk appetites vary. Interpretations of regulatory and legal obligations differ. Business models, internal processes, and technology stacks are never the same. Surveill is designed with this reality in mind, positioning the company as a forward deployed engineering firm in the legal and compliance space", said Aydin Bonabi, Surveill's CEO.

The next version of Surveill is built on five core components. Nexus connects documents, data, and context into a single source of truth. Doctrine is Surveill's proprietary rule and policy mapping layer, enforcing rule traceability, explainability in every response, and consistent outcomes for the same issues. Interpreter provides the document intelligence required to accurately understand complex materials, including footnotes, tables, and charts, reducing hallucinations by grounding analysis in the actual content of each document. Supervision

ensures that compliance and legal professionals remain firmly in control, actively overseeing AI activity at every critical step. Surveillance continuously monitors activity and escalates potential issues as they arise.

Together, these components define the next version of Surveill and its approach to modern compliance. To reflect this evolution, Surveill has also updated its website to better represent the platform and the company's direction.

"There is still so much left to build," the company noted.
