

# Regenerative Biologics Institute (RBI) Expands Stem Cell Therapies Under New Florida Law

*Florida patients can now access umbilical stem cell treatments and bank a lifetime supply of their own stem cells through culture expansion and cryopreservation*

VERO BEACH, FL, UNITED STATES, March 4, 2026 /EINPresswire.com/ -- [Regenerative Biologics Institute](#) (RBI), one of Florida's leading providers of regenerative and stem cell-based therapies, proudly announces a major

expansion of its stem cell treatment offerings in alignment with Florida's newly updated stem cell laws. These changes allow RBI to responsibly and legally offer next-generation regenerative therapies, including live umbilical-derived stem cell treatments and culture expansion and cryopreservation of a patient's own stem cells—a groundbreaking advancement in personalized medicine.

“

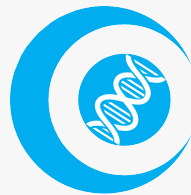

Florida's updated stem cell framework represents a major step forward for patients and provides access to advanced regenerative therapies that were previously unavailable in the United States.”

*Jason Griffeth*

With these regulatory updates, RBI is now able to provide patients access to cutting-edge regenerative solutions designed to support joint health, arthritis relief, pain management, tissue repair, and IV-based longevity and anti-aging therapies, all while adhering to the highest standards of safety, ethics, and medical oversight.

“Florida's updated stem cell framework represents a major step forward for patients,” said Jason Griffeth, M.S., Clinical Director & Cell Scientist at Regenerative Biologics Institute.

“These changes allow us to expand access to advanced regenerative therapies that were previously unavailable while still maintaining rigorous scientific and clinical standards. Patients that have had to go outside of the United States in the past can now get access to those same stem cell therapies right here in Florida. This represents a major shift in regenerative medicine. While umbilical-derived products have been marketed before, Florida's new law now allows for the use of live, viable umbilical stem cells for the first time.”

## A New Era: Personalized Stem Cell Banking & Regenerative Care

One of the most exciting advancements now available at RBI is the ability to culture expand a patient's own stem cells and cryopreserve them for long-term use. This process enables patients to create a personal stem cell reserve, a lifetime supply of their own biological cells, which may be used over time for orthopedic conditions, degenerative joint and spine disease, chronic pain, and age-related cellular decline.

This personalized approach allows patients to proactively invest in their future health by banking their own cells for use when regenerative support may be needed most.

In addition, RBI has expanded access to live umbilical-derived regenerative cell therapies, offering patients non-surgical options designed to support healing, reduce inflammation, and optimize recovery particularly for those seeking alternatives to surgery, steroids, or long-term medication use.

### Leadership in Regenerative & Longevity Medicine

Regenerative Biologics Institute has long been recognized for its leadership in regenerative joint and spine injections, [peptide therapy](#), [concierge medicine](#), functional medicine, and longevity-focused care. The expansion of its stem cell offerings further solidifies RBI's position at the forefront of regenerative medicine in Florida.

All treatments are delivered by experienced medical professionals using evidence-informed protocols, advanced processing techniques, and a patient-first approach focused on education, transparency, and individualized care.

"This isn't just about pain relief," added Griffeth. "It's about redefining how we approach aging, mobility, and long-term health—using the body's own regenerative potential."

### ABOUT REGENERATIVE BIOLOGICS INSTITUTE (RBI)

Regenerative Biologics Institute (RBI) is a Florida-based medical practice specializing in regenerative medicine, stem cell science, orthopedic biologics, functional medicine, peptide therapy and longevity optimization. The institute focuses on non-surgical solutions designed to reduce pain, restore function, and help patients improve long-term health and quality of life through personalized, evidence-informed care. With personalized care plans, a world-class clinical team, and an unwavering commitment to innovation, RBI offers a smarter, more proactive approach to health. An approach that restores vitality, slows aging, and transforms long-term well-being.
