

# Following more than two years of development and testing, Hairalicious® introduces the Ultra-thin silk top wig cap

Human hair wig manufacturer and retailer Hairalicious® is soft launching its new Ultra-thin silk top cap design.

LOS ANGELES, CA, UNITED STATES, February 17, 2026 /EINPresswire.com/ -- Human hair wig manufacturer and retailer [Hairalicious®](#) is soft launching its new Ultra-thin silk top cap design. This wig cap has been developed, tested, and refined for more than two years, and the first models are now gradually being offered to customers.

The brand emphasizes that at this stage, it is particularly important to consistently evaluate the customer experience and comfort and take this into account when further improving the product.

“

This is especially important for women who have their own hair under the wig, as the parting will look even more natural, and the wig itself will remain comfortable and convenient for everyday wear.”

Why was such a novelty needed in the silk top wig market? As the Hairalicious® team notes, lace top wigs have grown significantly in popularity in recent years. They are valued for their extremely thin construction and the ability to create a gradually thickening, curved hairline that gives an even more natural look. However, classic [silk top wigs](#), despite their realistic scalp effect, were often overlooked due to their thicker construction.

Solutions of this type emerge when the market matures and customers clearly articulate their needs. In recent years, there has been an increasing demand to combine

the advantages of different constructions, so the new cap is a response to these expectations.

“Silk top wigs used to dominate the market, but with the introduction of lace top constructions, they were almost completely replaced, as lace tops are much thinner and allow for a beautiful,

gradually thickening, curved hairline. When creating Ultra-thin silk top wigs, we sought to solve both of these problems. This construction is extremely thin, but unlike lace top wigs, its top layer is not transparent. This is especially important for women who have their own hair under the wig, as the parting will look even more natural, and the wig itself will remain comfortable and convenient for everyday wear," says Sarune Sidlauskiene, founder of Hairalicious®, sharing more about the brand's innovation.

Ultra-thin silk top cap that illustrates the exceptional thinness and natural-looking parting.

The company notes that making silk top constructions thinner comes with technical challenges. While reducing bulk improves the look and feel, it can also impact how securely hair is held in the cap over time. For this reason, Hairalicious® has focused on finding the right balance between ultra-thin design and durability.

According to Hairalicious® team, this design reflects a new approach to silk top wigs. Although this technological solution has been developed and refined for more than two years, wig manufacturers are still producing limited quantities, expanding their supply cautiously and continuing to evaluate the new product based on customer feedback and experience. The company also emphasizes that introducing new designs to the wig market requires responsibility. Even a visually successful solution must be tested under long-term wear conditions. For this reason, the limited launch model allows the company to ensure a stable quality standard before expanding production volumes.

It is gratifying that initial customer reactions have been extremely positive. According to Hairalicious®, it is precisely this feedback that has prompted the company to invest even more actively in improving its production processes and preparing for a wider range of products in 2026. Hairalicious® plans to gradually increase the number of wigs with Ultra-thin silk top caps in its range, while maintaining strict quality control.
