

Rochester Electronics Accelerates Digital Transformation of Manufacturing Archives with Soutron Corporate Archive SaaS

SAN DIEGO, CA, UNITED STATES,
February 19, 2026 /EINPresswire.com/

-- Soutron Global, an internationally recognized SaaS provider of information management, resource sharing, and digital preservation solutions for archives, libraries, and museums, today announced an [archives success story](#) in partnership with Rochester Electronics. The collaboration highlights a transformative enterprise-wide project that has successfully digitized decades of records, effectively eliminating archival debt while streamlining IP

traceability documentation across Rochester's global manufacturing operations, improving the speed and accuracy of provenance verification across its manufacturing operations.

The project, led by Rochester's Archive Services Department, focused on securing the provenance of EOL (End-of-Life) semiconductors. By migrating more than 2.5 million legacy entries into the Soutron Corporate Archive SaaS platform, the team replaced fragmented paper systems and legacy databases with a centralized, high-performance digital environment.

Powered by the Soutron Corporate Archive SaaS platform, the initiative:

- Strengthened metadata governance
- Established and improved internal technical communication standards
- Improved IP findability with accelerated search accuracy
- Reduced operational delays previously caused by fragmented records stored across paper boxes, filing cabinet systems, legacy databases, and multiple network drives.

"Soutron's archives platform and support services provided what we needed to digitize decades

of documentation into a centralized database that increased Rochester IP findability," states Meghan Turney, MLIS, Archives Supervisor at Rochester Electronics. "I can't say enough good things about Soutron, and highly recommend them."

By leveraging Soutron's [corporate archive solution](#), Rochester Electronics has reduced operational delays and mitigated risk associated with having to "no bid" projects that were previously caused by siloed records. The team was also able to quantify the immense cost savings of maintaining these digitized assets in-house.

"The Rochester Electronics project is indicative of the types of archiving projects we are seeing more often." states Brad Frasher, CEO of Soutron Global. "The need for easier searchability, and the long-term savings that would be achieved by digitizing all of their physical records. Meghan recognized this, rallied her troops, and completed their [digital archive](#) mission!"
