

SlotMatic Introduces SquadMatic: The Autonomous AI-Native Studio Transforming Slot Development

LONDRA, PA, UNITED KINGDOM, February 19, 2026 /EINPresswire.com/ -- There is a substantial difference between using artificial intelligence to accelerate a process and building a system capable of operating autonomously. With the completion of SquadMatic's internal testing phase, [SlotMatic](#) makes this decisive leap. Not just a technological upgrade, but a structural transformation: from a high-performance AI engine to an autonomous AI-native studio designed to develop online slots end-to-end with industrial-grade consistency.

From AI as Assistant to AI as Production Infrastructure

In the iGaming sector, many AI solutions focus on optimizing individual tasks: graphic generation, math support, test automation. SquadMatic was built with a different vision. It doesn't accelerate a fragment of the process — it coordinates the entire process. The system functions as a synchronized multi-agent digital team, simulating the dynamics of a full-scale development studio. Concept, mathematics, roadmap, build, QA, optimization, and compliance are orchestrated within a single intelligent production flow.

As [Domenico Vacchiano](#), Founder and CTO of SlotMatic, explains: "We don't simply want to build

Charles Herisson e Domenico Vacchiano, SlotMatic

Domenico Vacchiano, SlotMatic

more games in less time. Our ambition is to redefine the economics of development: moving from AI assistance to true production autonomy, where scalability no longer requires a proportional increase in costs and complexity".

[Charles Herisson](#), Director of Strategy, M&A and Investments at Hub Innovation Group, adds: "Starting in March, we will launch an international roadshow aimed exclusively at tier-one operators, with confirmed presence in the United Kingdom and the United States. We will dedicate full weeks to meetings with leading industry players to present SquadMatic and build long-term strategic partnerships. The level of interest we are seeing confirms that the market is ready for a new industrial model in slot development".

How SquadMatic Works

In practice, SquadMatic is a proprietary orchestration layer coordinating multiple specialized agents.

The system is capable of:

- Generating original concepts based on data and operational strategies
- Defining development roadmaps and production milestones
- Designing game mathematics, volatility models, and RTP structures
- Assembling complete builds through SlotMatic's infrastructure
- Running quality simulations and performance validations
- Automatically aligning production with regulatory requirements

Domenico Vacchiano, Founder di SlotMatic

AGENTIX

This is not simple workflow automation. SquadMatic replicates the decision-making discipline of an experienced studio, maintaining consistent quality standards throughout the entire development cycle.

Vacchiano summarizes: "Operators aren't looking for another tool that produces fragments. They're looking for infrastructure that industrializes creativity".

Test Results: Up to 70% Reduction in Production Cycle

During internal testing, SquadMatic demonstrated the ability to generate a fully playable prototype within days, compressing production cycles by up to 70% compared to traditional processes (depending on asset complexity and certification pathways).

The result is a production model characterized by:

- Drastically reduced time-to-market
- More predictable costs
- Scalable throughput
- Continuous optimization through iterative cycles
- Strategic portfolio-level control

In other words: a stable, measurable, and repeatable production pipeline.

Strategic Customization for Enterprise Operators

One of SquadMatic's key strengths is its ability to operate within strategic constraints defined by the operator.

The system can be guided through parameters such as:

- Target player profiles
- Volatility bands
- RTP ranges
- Thematic and art direction constraints
- Jurisdiction-specific regulatory requirements

- Portfolio objectives

SquadMatic does not generate randomness — it executes within clear rules, maintaining balance between production discipline and creative diversity.

A Paradigm Shift for iGaming

Traditional slot development has historically been resource-intensive, dependent on long timelines, and limited by human team capacity. SquadMatic changes this dynamic. It does not replace human strategic oversight but automates the production pipeline at industrial scale. Market context confirms this direction: operators are increasingly seeking scalable, AI-driven pipelines capable of ensuring predictability and control.

According to Vacchiano: "Our thesis is simple: the winners will be those who industrialize high-quality content".

A New Economics of Slot Development

With SquadMatic, SlotMatic introduces a model that enables:

- Faster ROI
- Accelerated portfolio diversification
- Reduced operational risk
- Continuous performance improvement
- Scalability without linear cost growth

This is not merely a technological upgrade. It is a rethinking of the productive foundations of the industry.
