

PMR Products Launches SafetyNet SELF-y – Real-Time User Pairing for Smarter Workforce and Equipment Management

SafetyNet SELF-y delivers real-time user pairing, improving accountability, safety and operational visibility across connected workforces

CHEPSTOW, UNITED KINGDOM, February 25, 2026 /EINPresswire.com/ -- [PMR Products](#) is proud to announce the launch of [SafetyNet SELF-y](#) – an innovative [real-time user pairing system](#) designed to give organisations complete visibility of their equipment and staff capabilities.

SafetyNet SELF-y real-time user pairing for smarter workforce and equipment management.

“

With SELF-y, organisations gain instant awareness of who is on shift, where they are, and what skills they bring. It’s faster, safer, and smarter workforce management”

Steve Clarke

SafetyNet SELF-y (SafetyNet Electronic Logon Facility) goes beyond traditional asset tracking. It links radios, keys, body-worn cameras, staff alarms, and other critical equipment directly to the people using them – and their qualifications – in real time.

How SELF-y Works:

- Dock the Equipment – Simply insert radios, cameras, keys, or alarms into the SELF-y docking unit.
- Tap to Tag the User – Staff tap their RFID badge to pair themselves with the item. Each piece of equipment is

instantly linked to a named individual and their skillset.

- Live Track & Trace – Every transaction is logged in real time, showing who has what, when, and their qualifications.

Why SELF-y Matters:

- Immediate visibility of staff and skillsets on shift
- Accurate, automatic logging via RFID – no manual data entry
- Supports incident investigation and audit compliance

- Minimises lost equipment and operational downtime
- Enhances resource planning and rapid deployment
- Scalable for any environment – from secure sites to stadiums

Whether managing a high-security site, frontline response team, or large event venue, SELF-y gives organisations the insights they need to respond efficiently in any scenario.
