

Modio.ai proposition is simple: prompt anything, keep everything. Users describe what they need in plain language and Modio's engine automatically selects the best AI model for the task. At launch, the platform supports 32 creation types across five categories: Images (logos, banners, ads, posters), Video (ads, explainers, interviews, animations), Sound (text-to-speech, music, dialogue, dubbing), Avatars (AI talking heads), and Documents (invoices, presentations, certificates, resumes). Behind the scenes, Modio orchestrates output from all major AI models on the market— with new models added continuously.

Not Just Access — Enhancement

What separates Modio from a simple model aggregator is what happens between the prompt and the final output. Modio chains multiple models together, applies intelligent pre- and post-processing, and adds creative logic that no single model can deliver alone. A user can type “Create a 15-minute podcast about our new product launch” and Modio will produce a complete, broadcast-ready episode — researching the product, writing a natural script with a narrative arc, generating distinct host and guest voices, adding intro music, mixing audio levels, and delivering a polished file. What would take a human producer hours is collapsed into a single prompt. This enhancement philosophy runs through every category: images get brand-aware prompt optimization, videos are assembled from scripted scenes with voiceover and music, and documents arrive fully formatted with correct layouts and professional typography.

From the Founders

“Teams were juggling five, six, sometimes ten different AI tools just to produce basic marketing content,” said Szymon Piekarz, Co-founder of Klono. “The models are incredible, but the experience around them is broken. Modio fixes that — one prompt, one dashboard, one place where everything lives. We think of it as the Key moment for AI content, except this time the platform doesn't just store your files, it creates them.”

“We don't just give people access to models — we enhance what those models can do,” added Denis Kuchur, Co-founder of Klono. “A single model can generate a voice clip or write a script. But it takes orchestration to turn one prompt into a complete 15-minute podcast with hosts, guests, music, and professional mixing. That's the layer we've built. We're building the content layer for every AI-native business, and Modio is the foundation of that vision.”

Built for Every Team

Modio serves a wide spectrum of users. Marketing teams can generate entire campaigns at scale — ad creatives, social posts, video ads, and voiceovers — from a single prompt. Agencies deliver client work faster with polished visuals and branded presentations. Individual creators gain a unified workspace for thumbnails, podcast audio, social video, and documents. Whether you are a solo entrepreneur or a 100-person content team, Modio replaces a dozen subscriptions with

one dashboard.

Availability

Modio is available now at modio.ai with a free tier requiring no credit card. Paid plans for teams and enterprises offer higher usage limits, priority model access, and dedicated support. For sales inquiries, visit modio.ai/contact.

About Klono

Klono Inc. is an AI orchestration company that unifies foundation models and SaaS applications into a cohesive framework powering AI-native products. Built on over 100 supporting models and 200 integrations connected through the Model Context Protocol (MCP), Klono's ecosystem includes Modio (AI media management), Airminal (AI voice interfaces), Empli (AI employees), and IOTO (robotics AI models).
