

MXK Digital Launches Limited-Capacity Technical Audits to Identify Compliance Gaps Before Regulatory Action

Firm Limits Infrastructure Reviews to 8 Agencies Per Week Due to Manual, Live-System Analysis

TX, UNITED STATES, March 2, 2026 /EINPresswire.com/ -- [MXK Digital](#), a performance architecture firm specializing in compliant-by-design infrastructure, today announced its [Technical Risk & Growth Audit](#). This manual review identifies compliance gaps in live agency systems before they result in carrier blacklists or federal enforcement actions. Due to the analyst-led process, audit capacity is limited to 8 agencies per week.

With multi-state privacy laws expanding to Indiana, Kentucky, and Rhode Island in 2026, and Meta increasing enforcement of the Special Ad Category, independent insurance agencies face operational challenges that legal and marketing teams cannot resolve alone. This results in infrastructure gaps: potential violations embedded in system configurations that agencies cannot detect without manual, live-system analysis.

The audit isn't about finding violations; it's about making violations technically impossible through infrastructure design."

Milan Krkljes, Founder & Performance Architect, MXK Digital

A single misconfigured workflow in an agency's CRM or dialer can result in TCPA violations, trigger carrier "Scam Likely" flags, or breach data sovereignty requirements

across states. These gaps are not visible in legal reviews, which assess compliance after the fact, or in marketing audits, which focus on performance metrics instead of regulatory architecture. Automated compliance software cannot detect intent-based configurations or workflow logic that creates liability under specific state laws.

The Technical Risk & Growth Audit addresses this gap through a 30-minute, manual infrastructure review conducted by senior compliance analysts with direct experience managing eight-figure advertising budgets for nine-figure brands. The review identifies real-time gaps by tracing data flow from the initial ad impression through the bound policy, pinpointing specific failure points in the compliance architecture.

"The audit isn't about finding violations," said Milan Krkljes, Founder and Performance Architect of MXK Digital. "It's about making violations technically impossible through infrastructure design."

The capacity limitation reflects the technical demands of the review process. Unlike automated scans that check only surface-level compliance, the Technical Risk & Growth Audit requires senior analysts to access live agency systems, examine CRM configurations, trace consent workflows, verify suppression latency, and test data sovereignty protocols against multi-state regulations. This analysis cannot be automated or delegated, resulting in a limit of 8 audits per week.

Agencies completing the Technical Risk & Growth Audit receive four deliverables. The Physical Agency Risk Scorecard is a color-coded assessment of exposure across 25 infrastructure threat vectors, delivered by courier for board review. The Digital Risk Scorecard provides the same assessment electronically for immediate access. The "Bleed Stop" Protocol is a prioritized checklist of the three most urgent fixes to be completed within 72 hours to halt active liability. Agencies with annual premiums over \$10 million can potentially receive a Growth Infrastructure Partnership Invitation detailing how MXK Digital can serve as a Fractional Compliance-Growth Partner to assume technical liability and manage lead-flow infrastructure.

The 25-point infrastructure assessment examines five critical liability vectors: Telemarketing and Carrier Standards, Meta's Special Ads Category, Vendor Auditing Protocols, Domain Authority and Email Deliverability, and Data Sovereignty Regulations

The audit methodology is based on the same infrastructure framework used in the [Safe Scale Protocol](#), which generated more than \$8,300,000 in verified pipeline value from over \$600,000 in managed advertising spend, with zero compliance violations during a controlled efficiency test.

Booking for the Technical Risk & Growth Audit is now open at booking.mxkdigital.com/technical-risk-growth-audit-booking. The standard audit fee is \$2,400. Eligible agencies are independent insurance agencies in the United States with established operations and an active CRM or lead-flow infrastructure. MXK Digital waives the \$2,400 fee for agencies with annual premiums over \$10 million. All booking requests are reviewed manually to confirm eligibility and ensure the audit addresses the agency's specific infrastructure. Approved bookings receive email confirmation with detailed preparation instructions.

The firm does not use automated screening or batch processing. Each audit receives individual

attention from senior compliance analysts, which limits capacity but ensures the quality and specificity needed to identify configuration-level gaps that generic compliance tools cannot detect.

The Technical Risk & Growth Audit is designed for established independent insurance agencies balancing aggressive growth targets with increasing regulatory complexity. As carrier oversight intensifies, federal enforcement expands, and platform restrictions tighten, the gap between compliant operations and technical liability continues to narrow.
