

StockKit.ai Launches Beta Platform That Embeds Institutional-Grade Trade Intelligence Into a Single Alert

StockKit.ai eliminates the complexity of traditional trading platforms by delivering everything a trader needs to act in a single alert.

SAN FRANCISCO, CA, UNITED STATES, April 1, 2026 /EINPresswire.com/ -- [StockKit.ai](https://www.einpresswire.com/stockkit-ai-launches-beta-platform) Launches Beta Platform That Embeds Institutional-Grade Trade Intelligence Into a Single Alert

StockKit.ai eliminates the complexity of traditional trading platforms by delivering everything a trader needs to act — analyst ratings, price targets, chart formations, news sentiment, and a live conviction score — inside one alert.

Simplicity - Data Embedded into a single alert

"Retail traders have always been at an information disadvantage. Not because the data doesn't exist, but because synthesizing it fast enough to act has always required years of experience.

“

Retail traders have always been at an information disadvantage. StockKit.ai changes that by combining RSI oversold signals with the same analyst data that institutional desks use”

James Forbes

StockKit.ai solves that by doing the synthesis for you — every data point serious traders rely on, already built into the alert before you see it.”

— James Forbes, Founder, StockKit.ai

StockKit.ai, an [algorithmic trading alert platform](#), today announced the public beta launch of its web dashboard and mobile-ready application.

Most trading platforms hand retail traders a toolkit of indicators and leave them to figure it out. StockKit.ai takes

the opposite approach. The moment a high-probability setup forms, traders receive a complete

trade picture in a single alert: analyst consensus ratings, consensus price targets with upside percentage, AI-curated news sentiment, chart formation detection with annotated explanation, support and resistance levels, and the Rockkit Rating — a proprietary 0–100 conviction score calculated live across eight factors including analyst upside, mean reversion, beta, volume, and momentum. Each data point is presented as a simple color-coded indicator. Traders can act in seconds or tap through for full detail — no chart-reading required either way.

Alongside its beta launch, StockKit.ai is now listed on PeerPush, a curated directory of emerging SaaS and fintech tools.

About the Platform

StockKit.ai monitors a curated universe of high-momentum stocks across three alert channels. Ram Jet targets RSI oversold bounce plays with a 10-day max hold. Rocket Fuel runs multi-stage swing trades tracking the full RSI cycle from oversold to overbought. Nitro focuses on a concentrated watchlist of the market's highest-beta momentum stocks. All three channels draw from stocks with proven 3, 6, and 12-month performance records, rebuilt every two weeks.

An AI trading coach, Rockkit, is available to Pro subscribers to take the platform's already high win rates even further. Rockkit continuously analyzes the full historical trade database — cross-referencing alert data, Rockkit Ratings, analyst consensus, news sentiment, chart formations, and actual trade outcomes — to identify which combinations of factors have historically produced the best results. When multiple alerts fire simultaneously, Rockkit ranks them by statistical strength, recommends position sizing based on the trader's current streak and risk profile, and provides plain-English rationale grounded in live market context. The goal is not just to surface high-probability setups, but to help traders systematically act on the highest-probability ones.

Performance

Over 4 months of live data, the Ram Jet strategy has delivered 85%+ win rates across more than 900 closed trades. Alerts rated 3–4 rockets on the Rockkit Rating system achieve win rates of 87–93%. Past performance does not guarantee future results.

Free, Pro and Premium Tiers

The platform is free forever for core alert access, performance dashboard, morning market report and community chat. The Pro Tier includes analyst ratings, price targets, RSI lists, news, market context with VIX feed and an AI trading advisor. The Premium Tier includes chart formations, support and resistance levels, volume indicator, earnings dates overlay, custom universes, and additional alert changes. A Pro tier is \$19.99/month and the Premium Tier is \$79.99/month. A 7-day money-back guarantee is offered on all Pro and Premium subscriptions.

Availability

StockKit.ai is available now at stockkit.ai. The free tier requires no credit card. Pro subscriptions are available at app.stockkit.ai.
