

# DLM-Distribution Highlights Simplified Engineering with the Mini-T HR Campervan

*The Mini-T HR Campervan reflects growing demand for intuitive operation and simplified system design in the Class B RV market.*

LAKE CRYSTAL, MN, UNITED STATES, March 3, 2026 /EINPresswire.com/ -- With Class B RV buyers placing increased emphasis on long-term ownership considerations, intuitive operation, and service accessibility in 2026, DLM-Distribution is highlighting the [Mini-T HR Campervan](#) as an example of a simplified engineering approach within the segment.

Mini-T HR Class B Campervan by DLM-Distribution featuring AWD capability, simplified electrical architecture, and an open interior layout.

Across the RV industry, purchase decisions are increasingly influenced by more than feature counts alone. Durability, system independence, ease of service, and practical design have become central considerations — particularly in the compact Class B category where functional balance and efficient space utilization are critical.

“

Our goal with the Mini-T HR was to deliver refined comfort and capability while maintaining intuitive operation and long-term service accessibility”

*Dave Mellon*

The Mini-T HR utilizes a simplified electrical architecture designed to prioritize intuitive operation and long-term serviceability. Rather than relying heavily on centralized control modules, major systems operate independently. This structure supports straightforward diagnostics and reduces the likelihood of widespread service interruption should one component require attention.

Control interfaces are intentionally clear and direct, supporting usability across a broad range of owners. By minimizing layered digital platforms, the design emphasizes durability and ease of use while maintaining modern capability.

The Mini-T HR is built on a gasoline platform and comes standard with all-wheel drive. The

gasoline powertrain allows for broad service accessibility throughout North America without dependence on specialized service centers, supporting long-term convenience and maintenance flexibility.

Interior design also reflects the emphasis on functional balance. The campervan features an open layout that maintains interior flow while preserving usable living and dining space without daily reconfiguration. The floor plan prioritizes accessibility and proportion within a compact footprint.

Recognizing the increasing importance of connectivity for work, communication, and media access, the Mini-T HR includes integrated Starlink capability.

DLM-Distribution, a Minnesota-based manufacturer and dealer of [Mini-T Campervans](#), sells factory-direct through its Lake Crystal, Minnesota facility, with nationwide sales and delivery available.

As the Class B RV market continues to evolve, system independence, service-conscious design, and intuitive operation remain central considerations for many buyers evaluating long-term ownership.
