

Strategic Super Reserve (\$SSR) Migrates to PumpSwap via Migrate.fun and Joins Pump.fun Build-In-Public Hackathon

Strategic Super Reserve (SSR) migrates to PumpSwap via Migrate.fun on Solana and joins Pump.fun's Build-In-Public Hackathon showcasing MultiHopper routing tech.

SINGAPORE, SINGAPORE, March 4, 2026 /EINPresswire.com/ -- [Strategic Super Reserve \(\\$SSR\)](https://www.einpresswire.com/2026/03/04/strategic-super-reserve-ssr-migrates-to-pumpswap-via-migrate.fun-on-solana-and-joins-pump.fun-s-build-in-public-hackathon-showcasing-multi-hopper-routing-tech/), a Solana-based project focused on decentralized treasury infrastructure and programmable capital flows, announced its migration to Pump.fun's new PumpSwap ecosystem via Migrate.fun, marking a major step in expanding liquidity and accessibility for the SSR community. The company is also currently participating in the Pump.fun BiP (Build-in-Public) hackathon.

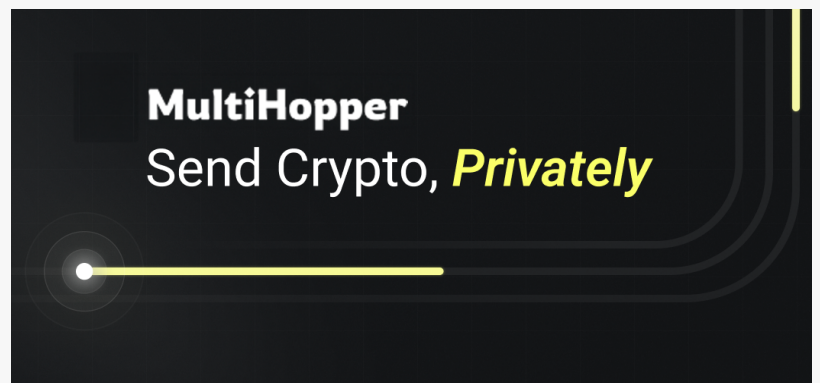

The migration introduces a new token contract for \$SSR:

New Contract Address (CA):
BpdHpqznEgYPXZnrJVRZvBhdWoafYLV
VuLxTQo34pump

By integrating with PumpSwap through Migrate.fun, SSR gains direct compatibility with one of the fastest-growing liquidity environments in the Solana ecosystem. PumpSwap has rapidly emerged as a key trading venue for emerging assets, enabling seamless token discovery, trading, and liquidity formation.

Strategic Super Reserve

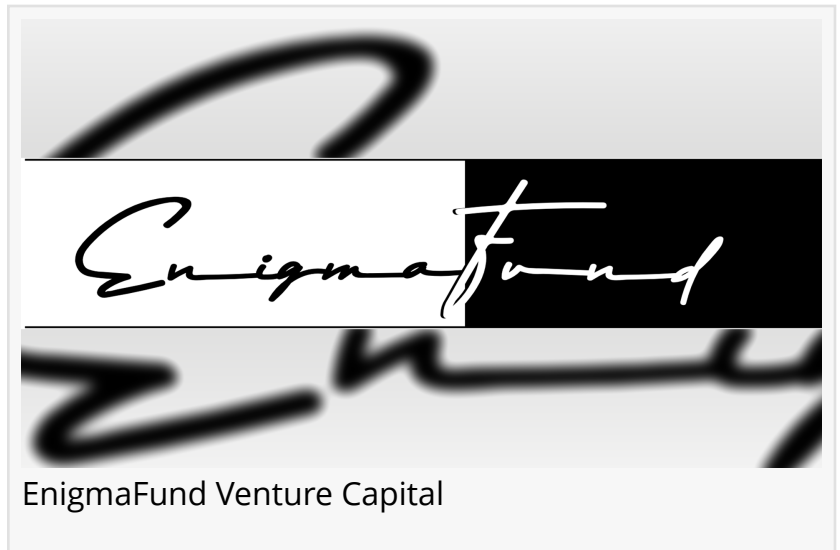

The move reflects SSR's broader strategy to remain closely aligned with Solana's most active on-chain ecosystems.

Strengthening Liquidity and Community Participation

The migration allows the SSR community to benefit from:

- Improved liquidity access within the PumpSwap ecosystem
- Enhanced discoverability among Solana traders and builders
- Streamlined token migration mechanics through Migrate.fun infrastructure
- Closer integration with Solana's emerging memetic and builder communities
- Creator fees to rechannel into the project

Migrating to the PumpSwap ecosystem and the PumpFun BiP hackathon has kicked open the doors to continuously showcase what we're shipping and why it matters, while fans support real progress."

founders of Strategic Super Reserve and MultiHopper

Strategic Super Reserve has increasingly positioned itself at the intersection of tokenized treasury strategies, community-driven finance, and decentralized infrastructure. Since its inception, SSR has invested over \$100,000 in startups onchain on Solana alone, and continues to build and run DTFs (Decentralized Token Folios - similar to onchain ETFs).

In parallel with the migration, SSR is also participating in the Pump.fun Build-In-Public (BiP) Hackathon, a high-visibility builder initiative highlighting innovative projects building directly within the Pump ecosystem. The SSR team

runs regular streams on their Pump.fun token page

(<https://pump.fun/coin/BpdHpqznEgYPXZnrjVRZvBhdWoafYLVVuLxTQo34pump>) where they regularly showcase new technologies being released by the project such as [MultiHopper](#).

MultiHopper is a programmable routing infrastructure designed to enable private and flexible transaction flows for digital assets on Solana.

MultiHopper acts as a form of programmable routing layer for on-chain capital, enabling users and protocols to move assets across wallets and destinations through configurable paths.

The project has already processed thousands of on-chain transactions and is positioning itself as foundational infrastructure for privacy-aware payment rails, DeFi routing, and automated

treasury management. Up to 50% percent of these revenues are mobilized into SSR DTFs and \$SSR treasury building. In the past month, the team have procured more than 5% of the \$SSR supply, soon to be locked up for 36 months on a linear release.

Through initiatives like MultiHopper and ecosystem integrations such as PumpSwap, SSR aims to help advance the development of more flexible, privacy-respecting financial rails for digital assets and support the best projects and communities with liquidity and attention.

Participation in the Pump.fun BiP Hackathon represents an opportunity for the project to build openly alongside other developers contributing to the rapid evolution of Solana's on-chain economy.

About Strategic Super Reserve (SSR)

Strategic Super Reserve (\$SSR) is a Solana-based project focused on building infrastructure and mechanisms that enable programmable capital flows, decentralized treasury systems, and privacy-aware transaction routing. The SSR ecosystem includes the MultiHopper routing infrastructure, which allows users and protocols to send assets through programmable transaction paths on-chain. SSR is an EnigmaFund Venture Capital company, fair-launched and self-funded.
