

JC-Electronics unveils major industry report on refurbished industrial electronics

JC-Electronics has launched RE:SOURCE, a major new industry report on industrial electronics

SPRINGFIELD, PA, UNITED STATES, March 5, 2026 /EINPresswire.com/ -- [JC-Electronics](#) has launched [RE:SOURCE](#), a major new industry report on industrial electronics that helps businesses make an informed choice amid the many considerations they face around inventory management.

A leading supplier of refurbished industrial electronics, JC-Electronics, which is celebrating its 20th anniversary this year, is known for combining high-quality refurbishment processes with strict quality controls to give industrial electronics a second life.

The free, informative report features in-depth interviews with a plethora of industry experts from around the world, each offering their insights into a facet of industrial electronics – from sourcing to maintenance to repairs.

Customers can request a printed copy of the magazine via the company's website [here](#).

Through articles such as "To upgrade or not to upgrade?", "Let's talk money: balancing costs and longevity in

The new RE:SOURCE magazine from JC-Electronics

The JC-Electronics headquarters in the Netherlands has over 300,000 products in stock

equipment management”, and “AI and machine learning in industrial electronics”, readers benefit from the experience of chief technical officers, commercial directors, plant managers, procurement leads, and more.

Gerard Katje, Managing Director at JC-Electronics, comments: “The various decisions that businesses must make regarding their industrial electronics can be daunting. For example, where’s the best place to source from? When is it best to refurbish, and when to upgrade? What does the latest sustainability legislation say? These are important questions, with the power to affect any business – but they’re often tricky to answer without expert guidance.

The refurbishment process now transforms electrical equipment to a like-new condition that often requires less maintenance than brand-new models

“What RE:SOURCE does is guide readers through these challenges using the best and most experienced minds in industrial electronics – all in a concise and accessible magazine.”

What RE:SOURCE does is guide readers through these challenges using the best and most experienced minds in industrial electronics – all in a concise and accessible magazine”

Gerard Katje, Managing Director at JC-Electronics

Throughout the guide, a clear theme emerges that many of the preconceptions that people have about second-hand electronics are now outdated and unhelpful. For example, there has long been a stereotype that refurbished products do not work as well as new products, do not come with clear information, and require more maintenance.

However, the testimony of the expert interviewees repeatedly demonstrates that these things are not true, and that professional refurbishment is now an excellent

choice. This is because it has evolved to include standardised processes, component replacement, comprehensive testing, and quality assurance protocols.

“The truth is that, when done right, the refurbishment process now transforms electrical equipment to a like-new condition that often requires less maintenance than brand-new models,” says Gerard. “When you add transparency to this, allowing buyers to see exactly what exists and compare prices and lead times, then refurbished equipment becomes a highly attractive proposition.

“This is just one of the key insights that readers will take away from our new industry report, which helps them cut through the noise and make informed choices that benefit their businesses.”
