

# Charles & Son Construction & Landscaping Expands Integrated Outdoor Solutions

*Charles and Son Construction & Landscaping is a West Orange, New Jersey-based company providing landscape design, masonry, outdoor lighting, drainage solutions.*

WEST ORANGE, NJ, UNITED STATES, March 10, 2026 /EINPresswire.com/ -- Charles and Son Construction & Landscaping, a full-service outdoor construction and landscape company based in West Orange, New Jersey, continues to serve residential and commercial property owners throughout the state with a broad range of exterior improvement services. Recognized by many local clients as one of the [Best Construction and Landscaping Company in NJ](#), the company has established its presence through consistent project delivery, structured planning, and an emphasis on workmanship standards.

With the warmer seasons approaching, outdoor renovation and landscaping projects are increasing across New Jersey communities. As property owners prepare for spring and summer enhancements, demand for professional landscape design, hardscape construction, and outdoor living improvements has risen. Charles and Son Construction & Landscaping reports that scheduling timelines may vary depending on project scope and seasonal demand, and clients are encouraged to plan accordingly.

Best Construction and Landscaping Company in NJ

Masonry and hardscape services

The company offers an integrated suite of services that combine landscape design, construction, and property enhancement under one operational structure. This approach allows homeowners and property managers to coordinate multiple outdoor improvements through a single contractor.

**Landscape Design and Installation**  
Landscape design and installation remain core components of the company's services. Charles and Son Construction & Landscaping develops customized outdoor layouts based on property dimensions, environmental considerations, drainage patterns, and client objectives. The process typically includes site evaluation, concept planning, material selection, and phased installation.

Landscape installations may include plantings, shrubs, turf areas, decorative stonework, garden beds, and structural landscape features.

Projects are executed with consideration for long-term maintenance, seasonal adaptability, and soil and climate conditions specific to New Jersey. The company emphasizes structured project management to ensure that installations align with approved plans and timelines.

### Masonry and Hardscape Construction

[Masonry and hardscape services](#) form a significant portion of the company's project portfolio. These services include patios, walkways, retaining walls, driveways, stonework, paver installations, and other structural exterior features.

Hardscape elements play both aesthetic and functional roles in outdoor spaces. Proper grading, drainage design, and base preparation are essential components of masonry construction. Charles and Son Construction & Landscaping incorporates these factors into each project to support durability and compliance with local construction practices.

Retaining walls and drainage-related hardscape structures are particularly relevant in areas with

Outdoor lighting installation

Drainage management

elevation changes or water management challenges. The company integrates engineering considerations into these projects to address structural integrity and soil stability.

### Outdoor Lighting Systems

[Outdoor lighting installation](#) is another service offered by Charles and Son Construction & Landscaping. Landscape lighting systems are designed to enhance visibility, improve safety, and highlight architectural or landscape features.

Lighting installations may include pathway illumination, accent lighting for trees or masonry features, deck lighting, and perimeter lighting systems. The company considers electrical safety, placement efficiency, and long-term maintenance when installing lighting infrastructure.

Strategically placed lighting can extend the usability of outdoor spaces into evening hours while supporting property security objectives.

### Drainage Solutions

Drainage management is a critical aspect of landscape and construction planning. Improper drainage can lead to soil erosion, water pooling, foundation concerns, and damage to hardscape installations.

Charles and Son Construction & Landscaping provides drainage assessments and corrective installations, including grading adjustments, French drains, channel drains, and water diversion systems. These services are designed to mitigate water-related risks and preserve the longevity of landscaping and structural features.

Drainage planning is often incorporated during the initial design phase of larger landscape and construction projects to ensure cohesive execution.

### Fence and Deck Installation

Fence and deck installation services are offered to property owners seeking privacy, defined property boundaries, and expanded outdoor living space. Deck construction projects may include wood or composite materials, depending on client preference and site conditions.

Fence installations may serve decorative, privacy, or security purposes. Material options and installation techniques are selected based on durability requirements, municipal regulations, and property layout.

Deck structures are built with consideration for structural framing, load support, and integration with surrounding landscape features. These installations often function as extensions of indoor living spaces and may incorporate lighting or masonry components.

### Tree Removal and Site Preparation

Tree removal services are available for properties requiring site clearing, safety mitigation, or

renovation preparation. Tree removal may be necessary due to storm damage, disease, structural instability, or landscape redesign plans.

The company conducts removal operations using appropriate equipment and safety procedures. In some cases, tree removal is coordinated with broader landscaping or construction efforts to prepare sites for new installations.

Site preparation services may also include grading, debris removal, and surface leveling prior to construction or planting work.

#### Operational Planning and Seasonal Demand

As seasonal demand increases during spring and summer months, project scheduling timelines may vary depending on scope, permitting requirements, and material availability. Charles and Son Construction & Landscaping advises property owners to initiate consultations in advance of desired completion dates.

Project duration depends on several factors, including property size, complexity of design, weather conditions, and coordination of multiple service categories such as masonry, drainage, and landscape installation. The company maintains structured workflows to manage concurrent projects while adhering to safety and quality standards.

The designation “Best Construction and Landscaping Company in NJ” is frequently associated with the company in online directories and customer discussions. Such characterizations reflect client perceptions and community feedback and are not presented as independently certified rankings.

#### Serving Communities Throughout New Jersey

Based in West Orange, NJ, Charles and Son Construction & Landscaping serves clients across various New Jersey municipalities. The company’s geographic location allows it to operate throughout Essex County and surrounding regions, responding to residential and commercial property needs.

Local knowledge of soil composition, seasonal weather patterns, and municipal construction guidelines informs the company’s approach to project planning. This familiarity supports compliance and efficient execution across diverse property types.
